Building Construction and Design J.E. Ambrose, 2014-05-14 This book addresses for the student of architecture a subject that is of interest to a wide range of people with various relationships to the designing and constructing of buildings There is at any given time a great mass of information on these topics which may be accessed for application to the many tasks of designers builders suppliers and others The enormity of this information resource is at once reassuring to those who regularly encounter needs for it and overwhelming to just about everyone who needs to figure out how to use it It is especially important for the young designer to be aware of and familiar with the entire framework and of the place of design within it This book relates the topic of building construction to the basic problems of building design The basic assumption here is that the need to design precedes the need to build and that real concern for how to build comes from a desire to build something This is the normal process of development for designers and others who start from the point of desiring a building and then proceed to determine what it should be Intense concern for specific consideration of building materials systems and details of construction thus emerges at a later stage of design typically after the general form size and essential nature of the building are already proposed

Learning by Building William J. Carpenter,1997-04-03 Learning by Building challenges today s architects and students to experience the energy and creativity of construction Based on the example of famous architects such as Frank Lloyd Wright and Le Corbusier who considered construction an integral part of the design process design build is standard practice in growing numbers of today s architecture firms Architect and professor William J Carpenter explores ways to integrate construction into architectural education bridging the gap between theory and practice between designing and building Mr Carpenter traces the history of construction in architectural education from medieval times to Jefferson s Monticello to the German Bauhaus He cites twentieth century artists such as Richard Serra and Donald Judd whose work is generated by the process of making like the artist the architect should be immersed in the potential of construction Ten in depth case studies of schools that have incorporated design build into their curriculum illustrate how construction studios help future architects learn real life pragmatics and collaboration Through text and photographs Mr Carpenter recounts the diverse experiences of

high profile schools such as Cranbrook and Yale University providing models for other schools that wish to include design build in their curriculums Mr Carpenter also gives a helpful outline of the practical details involved in design build such as team issues legal issues and built applications of the process Learning by Building is a wake up call to architects and students alike to immerse themselves in the process of architecture to rediscover or witness for the first time the excitement of building
