Jeffery,2021-12-31 Written by the creator of the Unicon programming language this book will show you how to implement programming languages to reduce the time and cost of creating applications for new or specialized areas of computing Key Features Reduce development time and solve pain points in your application domain by building a custom programming language Learn how to create parsers code generators file readers analyzers and interpreters Create an alternative to frameworks and libraries to solve domain specific problems Book Description The need for different types of computer languages is growing rapidly and developers prefer creating domain specific languages for solving specific application domain problems Building your own programming language has its advantages It can be your antidote to the ever increasing size and complexity of software In this book you ll start with implementing the frontend of a compiler for your language including a lexical analyzer and parser The book covers a series of traversals of syntax trees culminating with code generation for a bytecode virtual machine Moving ahead you ll learn how domain specific language features are often best represented by operators and functions that are built into the language rather than library functions We ll conclude with how to implement garbage collection including reference counting and mark and sweep garbage collection Throughout the book Dr Jeffery weaves in his experience of building the Unicon programming language to give better context to the concepts where relevant examples are provided in both Unicon and Java so that you can follow the code of your choice of either a very high level language with advanced features or a mainstream language By the end of this book you ll be able to build and deploy your own domain specific languages capable of compiling and running programs What you will learn Perform requirements analysis for the new language and design language syntax and semantics Write lexical and context free grammar rules for common expressions and control structures Develop a scanner that reads source code and generate a parser that checks syntax Build key data structures in a compiler and use your compiler to build a syntax coloring code editor Implement a bytecode interpreter and run bytecode generated by your compiler Write tree traversals that insert information into the syntax tree Implement garbage collection in your language Who this book is for This book is for software developers interested in the idea of inventing their own language or developing a domain specific language Computer science students taking compiler construction courses will also find this book highly useful as a practical guide to language implementation to supplement more theoretical textbooks Intermediate level knowledge and experience working with a high level language such as Java or the C language are expected to help you get the most out of this book **A Structured Approach to Building Programs** Timothy D. Fenton,Gillian Hill,1993 This text provides the discrete mathematics needed as a rigorous foundation for the construction and analysis of application systems Construction involves development within formal linguistic systems and analysis involves external assessment and measurement The foundation provided by this book allows for many applications to be discussed in detail A gentle introduction to discrete mathematics and formal systems allows a gradual pace of learning for the student and examines ideas before giving a serious exposition of mathematical logic that emphasizes the link between theories in formal languages and their models The major programming paradigms are linked to approaches to specification and verified by the axiomatic method *Computer Applications in Construction* Boyd C. Paulson,1995 Through the material readers are given the ability to analyze systematically a potential area of need such as a function in a department to determine whether a computer application might help to assess the costs and benefits of alternative proposals and to proceed from that analysis to a clear specification for what the proposed solution should accomplish There is also coverage of how computer professionals evaluate hardware and design the software and systems that will implement a given application Furthermore readers will learn how to manage the people resources time and money required in the development process for creating a given application program or for adapting a package application to the needs specified in the design *Training and Development Organizations Directory* ,1988 **Energy Research Abstracts** ,1986 *Encyclopedia Americana: Civilization to Coronium* ,2005
