Causes and Issues of Climate Change and Global Warming Selina Kolls,2016-08-30 Essay from the year 2016 in the subject Politics International Politics Environmental Policy grade 97 language English abstract As a consultant in energy and sustainable development for the UN your role is to provide a guideline and information on issues connected to the oil and gas production and applications as one of the major causes for climate change and global warming For this reason sustainable development of oil and gas industries is an important factor for example in how oil and gas companies are able to divert into cleaner sources of sustainable energy and the consequent impacts on the environment in general and the climate in particular Currently the greatest worry among the environmentalists and the UN is the huge concern regarding the present rising levels of the earth s temperatures Among their top concern is the continued effects of greenhouse gases to the atmosphere that continually contribute to the global warming of the earth More so the increased and exploitative usage of the fossil fuels in the modern industries contributes to the increase in the global temperatures The reason of the worries is the fact that the over accumulation of the carbon IV oxide in the atmosphere continually deteriorates the climatic balance of the earth Additionally the top reasons causing the worries of the global warming effects on the Earth arise from the provision that the factors leading to the global warming and causing the upsetting climatic changes are synthetic and human beings contribute a huge role to the destruction of the atmosphere The following write up aims to focus on the various contributing factors of the climate change and those causing global warming More so the paper will address

the challenges and benefits that would arise if the conventional energy producers would consider seeking greener or renewable sources for their energy with a particular focus on oil and petroleum companies In addition the paper will have s

Land Use and the Causes of Global Warming W. Neil Adger, Katrina Brown, 1995-02-17 Global warming through the enhanced greenhouse effect is one of the major and most uncertain forces of global environmental change presently facing the earth This book is a guide to the scientific and policy debate concerning the roles of agriculture forestry and other activities leading to global warming The influence of land use on the greenhouse effect is important not only in terms of net emissions of greenhouse gases but also in the potential to reduce emissions through changing land use policies Land Use and the Causes of Global Warming reviews the global emissions of greenhouse gases from land use sources highlighting the uncertainties in estimating both the magnitude of the fluxes and the scale of land use change Policies of afforestation policies to encourage the halting of deforestation and changing management practices in agriculture are all examined from the perspectives of feasibility cost and equity The authors illustrate how all land use policies are multi objective but that the reduction of greenhouse gas emissions must be a key element in forestry and agriculture policy on a global basis This is an invaluable book for all those in the climate change research community environmental scientists economists and social scientists in research institutions

Canada and Climate Change William Leiss, 2022-11-18 Pandemics massive earthquakes war and other catastrophes inspire immediate action because their casualties and destruction are immediately visible Climate change is an unyielding problem because its long range dangers are hidden and thus it is a global risk unlike anything in human experience The federal government recently announced aggressive climate targets for Canada We have committed to producing net zero greenhouse gas emissions by 2050 which will require major changes for our economy and way of life Canadian citizens need to understand why our most distinguished climate scientists and our senior political leaders think that we must meet this target Canada and Climate Change explains the importance of policies that will ensure we meet the net zero emissions target William Leiss provides a firm grasp on what climate change is and how scientists have described shifts in the earth's climate as they have occurred over hundreds of millions of years and as they are likely to occur in the near future especially by the end of this century Leiss argues that citizens have a right to place their trust in what climate scientists tell us Canada and Climate Change is an essential primer on where we stand on the issue of climate change in Canada and what will unfold in the years ahead
