Between Ice Ages:

Ice Ages and Interglacials Donald Rapp, 2019-04-13 This book provides a detailed review of terminations of ice ages including a very attractive theory based on dust deposits on ice sheets While other books on ice ages are mostly short popular and non technical the only book that attempts to deal with the broad issues of what we know about past ice ages and why they occur is the book by Muller and MacDonald M M published by Praxis However despite its many good features this book suffers from an inordinate emphasis on spectral analysis a lack of coverage of new data and a very confusing sequence of chapters As a result the data and theory are so intimately entwined that it is difficult to separate one from the other This volume provides an independent and comprehensive summary of the latest data theories and analysis This third edition of what has become the premier reference and sourcebook on ice ages addresses recent topics and includes new references new data and a totally new greatly expanded treatment of terminations of ice ages

Cosmological Ice Ages Henry Kroll, 2009-08-19 I plotted our suns course through space to discover that our sun was born in the constellation Orion After the planets were formed Earth was covered with a five mile thick coating of ice one billion years We eventually drifted near the Sirius multiple star system and little Sirius B 1 5 solar masses grabbed hold of our sun putting it in orbit around Sirius A During the rein of the dinosaurs the atmospheric pressure was around 30 pounds per square inch Now it is 14 5 pounds per square inch Before our sun was captured by the Sirius system earth had an atmosphere of 750 pounds per square inch Such an atmosphere extended 2 500 miles above the planet There was no way sunlight could thaw out mile deep ice over the oceans It took the power of a white dwarf to get life started Our sun does not have enough power to keep us out of the ice ages otherwise we wouldnt have them Cosmological Ice Ages Solved the greatest mysteries of all time Where was our sun born What took Earth out of a billion year ice age What made all the coal oil and limestone How did Earth get a 20 8% oxygen atmosphere Where did the energy come from to make all the coal oil and limestone Who what when and why was the moon brought into orbit around Earth By Henry Kroll 384 pages 8 5 by 11 quality trade paperback soft cover Catalog 08 0164 ISBN 1 4251 7062 5 US 31 35 C 31 35 EUR21 42 16 19 About the Book I plotted our suns course through space to discover that our sun was born in the constellation Orion After the planets were formed Earth was covered with a five mile thick coating of ice one billion years with an atmospheric pressure of over 750 pounds per square inch Sunlight could not penetrate such an atmosphere extending 2 500 miles above the planet We eventually drifted near the Sirius multiple star system Little Sirius B 1 5 solar masses grabbed hold of our sun putting it in orbit around Sirius A Earth has lost 98% of its atmosphere AKA radiation shield Our sun does not have enough power to keep us out of the ice ages The additional light and heat from Sirius star system that melted the ice caps and got life started in the oceans Over time the 750 PSI carbon dioxide atmosphere was laid down as coal oil and limestone using photosynthesis and light from Sirius A and B Dinosaurs couldnt live in todays atmosphere because their lungs were too small 65 million years ago the atmosphere was 30 to 60 PSI Earth has
