Advances In Information Systems Science Volume 8:

Advances in Information Systems Science Julius T. Tou, 2011-09-27 Volume 9 of this series on information systems science presents four timely topics of current interest in this growing field. In each chapter an attempt is made to familiarize the reader with some basic background information on the advances discussed so that this volume may be used independently or in conjunction with the previous volumes. The emphasis in this volume is on data structures for scene analysis, database management technology, inductive inference in processing pattern based information, and logic design of MOS networks. Scene analysis has become a very important aspect in information system design. The process of scene analysis involves sensing, segmentation, recognition, and interpretation. Innovative development of algorithms for these tasks requires the utilization of structural relationships prevalent within the sensed data. In Chapter 1 Thomason and Gonzalez discuss the formulation of data representation techniques and the properties of data structures and databases in scene analysis. In view of the growing importance of database management, Chapter 2 is devoted to an overview of database management technology. In this chapter Kobayashi covers a variety of current topics. The topics discussed include system design methodology, data structure theory, semantic considerations, calculus based database operations, database management functions, and the issues of integrity, security, concurrency, and recoverability. This chapter also discusses the end user languages and several existing database management systems.

Advances in Information Systems Science Julius T. Tou, 2012-12-06 This volume, the eighth of a continuing series on information systems science, presents five timely topics which are of current interest in this growing field. In each chapter an attempt is made to familiarize the reader with some basic background information on the advances discussed so that this volume may be used independently or in conjunction with the previous volumes. The emphasis in this volume is centered upon file organization and performance evaluation, computational semantics, digital control, clustering analysis, and geometric modeling. Chapter 1 presents a comprehensive survey of file organization. In this chapter Gudes and Ganesh discuss performance evaluation, implementation considerations, relationship to database models, and performance tradeoffs of various file organizations. The semantics of programming languages was discussed in Volume 2 of this series. This topic is revisited by Culik II and Farah from a different point of view. Chapter 2 is concerned with linked forest manipulation and models for formal description of a programming language. Linked trees reveal syntactical properties of a programming language and provide data structures for describing computational semantics.
