Visual and Spatial Analysis Boris Kovalerchuk,James Schwing,2007-11-06 Advanced visual analysis and problem solving has been conducted successfully for millennia The Pythagorean Theorem was proven using visual means more than 2000 years ago In the 19th century John

Snow stopped a cholera epidemic in London by proposing that a specific water pump be shut down. He discovered that pump by visually correlating data on a city map. The goal of this book is to present the current trends in visual and spatial analysis for data mining, reasoning, problem solving, and decision making. This is the first book to focus on visual decision making and problem solving in general with specific applications in the geospatial domain, combining theory with real world practice. The book is unique in its integration of modern symbolic and visual approaches to decision making and problem solving. As such, it ties together much of the monograph and textbook literature in these emerging areas. This book contains 21 chapters that have been grouped into five parts: 1. visual problem solving and decision making, 2. visual and heterogeneous reasoning, 3. visual correlation, 4. visual and spatial data mining, and 5. visual and spatial problem solving in geospatial domains. Each chapter ends with a summary and exercises. The book is intended for professionals and graduate students in computer science, applied mathematics, imaging science, and Geospatial Information Systems (GIS). In addition to being a state of the art research compilation, this book can be used as a text for advanced courses on the subjects such as modeling, computer graphics, visualization, image processing, data mining, GIS, and algorithm analysis.

Trends in Spatial Analysis and Modelling Martin Behnisch, Gotthard Meinel, 2017-10-24
This book is a collection of original research papers that focus on recent developments in Spatial Analysis and Modelling with direct relevance to settlements and infrastructure. Topics include new types of data such as simulation data, applications of methods to support decision making, and investigations of human environment data in order to recognize significance for structures, functions, and processes of attributes. Research incorporated ranges from theoretical through methodological to applied work. It is subdivided into four main parts: the first focusing on the research of settlements and infrastructure, the second studies aspects of Geographic Data Mining, the third presents contributions in the field of Spatial Modelling, System Dynamics, and Geosimulation, and the fourth part is dedicated to Multi Scale Representation and Analysis. The book is valuable to those with a scholarly interest in spatial sciences, urban and spatial planning, as well as anyone interested in spatial analysis and the planning of human settlements and infrastructure. Most of the selected papers were originally presented at the International Land Use Symposium (ILUS) 2015: Trends in Spatial Analysis and Modelling of Settlements and Infrastructure, November 11-13, 2015, in Dresden, Germany.
