Evans, Vimla L. Patel, 2013-06-29 Cognitive science is a multidisciplinary science concerned with understanding and utilizing models of cognition It has spawned a great deal of research on applications such

as expert systems and intelligent tutoring systems and has interacted closely with psychological research. However, it is generally accepted that it is difficult to apply cognitive scientific models to medical training and practice. This book is based on a NATO Advanced Research Workshop held in Italy in 1991, the purpose of which was to examine the impact of models of cognition on medical training and practice and to outline future research programmes relating cognition and education and in particular to consider the potential impact of cognitive science on medical training and practice. A major discovery presented in the book is that the research areas related to artificial intelligence, cognitive psychology and medical decision making are considerably closer both conceptually and theoretically than many of the workshop participants originally thought.

*Nursing Informatics for the Advanced Practice Nurse* Susan McBride, Mari Tietze, 2015-12-03. Designed specifically for graduate level nursing informatics courses, this is the first text to focus on using technology with an interprofessional team to improve patient care and safety. It delivers an expansive and innovative approach to devising practical methods of optimizing technology to foster quality of patient care and support population health initiatives. Based on the requirements of the DNP Essential IV Core Competency for Informatics and aligning with federal policy health initiatives, the book describes models of information technology the authors have successfully used in health IT as well as data and analytics used in business for profit industry and not for profit health care association settings which they have adapted for nursing practice in order to foster optimal patient outcomes. The authors espouse a hybrid approach to teaching with a merged competency and concept based curriculum. With an emphasis on the benefits of an interprofessional team, the book describes the most effective approaches to health care delivery using health information technology. It describes a nursing informatics model that is comprised of three core domains: point of care technology, data management and analytics, and patient safety and quality. The book also includes information on point of care applications, population health, data management and integrity, and privacy and security. New and emerging technologies explored include genomics, nanotechnology, artificial intelligence, and data mining. Case studies and critical thinking exercises support the concept based curriculum and facilitate out of the box thinking. Supplemental materials for instructors include PowerPoint slides and a test bank. While targeted primarily for the nursing arena, the text is also of value in medicine, health information management, occupational therapy, and physical therapy.

**Key Features:** Addresses DNP Essential IV Core Competency for Informatics. Focuses specifically on using nursing informatics expertise to improve population health, quality, and safety. Advocates an interprofessional team approach to optimizing health IT in all practice settings. Stimulates critical thinking skills that can be applied to all aspects of IT health care delivery. Discusses newest approaches to interprofessional education for IT health care delivery.
