s focus is an examination of the ways in which people find themselves in social spaces without empirical clarity and understand that absence as satisfaction stability or perhaps even pleasure It discusses a range of topics including for example people s sense of relative safety despite empirical realities suggesting otherwise This book seeks to make visible the role of ignorance in governing society highlighting how the late modern human experience in a post World War II human rights era subsumes subverts and sublimates the complex relationship between knowledge and denial the empirical gulf between knowledge and resistance may indeed breed complicit bliss

Mismanaged Money in American Healthcare

Lisa Famiglietti, Mark Scott, 2023-08-30 Warren Buffett famously invoked the metaphor of a tapeworm when describing what healthcare is to the American economy The United States spends approximately 20% of its gross national product on healthcare but it is unclear where the money goes or who is minding the store This healthcare crisis is mostly about money not lack of money but rather misspending of money From the perspective of a healthcare auditor and provider this work describes the problems of American healthcare finance and proposes solutions Extensive charts and graphs are used to trace where money goes in the American healthcare system while other topics such as ethics in healthcare billing un-auditable hospital costs and scams are discussed There is evidence that clearly identifies where the money goes and its destination may surprise the reader

Agents of Apocalypse

Ken De Bevoise, 1995-01-03 As waves of epidemic disease swept the Philippines in the late nineteenth century some colonial physicians began to fear that the indigenous population would be wiped out Many Filipinos interpreted the contagions as a harbinger of the Biblical Apocalypse Though the direct forebodings went unfulfilled Philippine morbidity and mortality rates were the world s highest during the period 1883-1903 In *Agents of Apocalypse* Ken De Bevoise shows that those mourning years resulted from a conjunction of demographic economic technological cultural and political processes that had been building for centuries The story is one of unintended consequences fraught with tragic irony De Bevoise uses the Philippine case study to explore the extent to which humans participate in creating their epidemics Interpreting the archival record with conceptual guidance from the health sciences he sets tropical disease in a historical framework that views people as interacting with rather than acting within their total environment The complexity of cause-effect and agency-structure relationships is thereby highlighted Readers from fields as diverse as Spanish American and Philippine history medical anthropology colonialism international relations Asian studies and ecology will benefit from De Bevoise s insights into the interdynamics of historical processes that connect humans and their diseases
