

Overview of Neurocomputing

- The brain is said to be composed of natural neural network, i.e., mass of highly ***non-linear parallel inter-connected*** computational units called *neurons*.
- Each neuron is connected to many other neurons
- Neurons transmit signals to each other
- Whether a signal is sent, depends on the **strength of the bond** between two neurons
- Whether a signal is transmitted is an **all-or-nothing** event (the electrical potential in the cell body of the neuron is **thresholded: fired up/ activated**)
