Computational Models Of Discourse:

Computational Models of Discourse Michael Brady, 1983-02-01 As the contributions to this book make clear a fundamental change is taking place in the study of computational linguistics analogous to that which has taken place in the study of computer vision over the past few years and indicative of trends that are likely to affect future work in artificial intelligence generally The first wave of efforts on machine translation and the formal mathematical study of parsing yielded little real insight into how natural language could be understood by computers or how computers could lead to an understanding of natural language The current wave of research seeks both to include a wider and more realistic range of features found in human languages and to limit the dimensions of program goals Some of the new programs embody for the first time constraints on human parsing which Chomsky has uncovered for example The isolation of constraints and the representations for their expression rather than the design of mechanisms and ideas about process organization is central to the work reported in this volume And if present goals are somewhat less ambitious they are also more realistic and more realizable

Computational Models of Reading Erik D. Reichle, 2021 Computational Models of Reading is a reference book that can be used to learn about reading research and how computer models have been used to explain and simulate the mental processes involved in reading These mental processes include the identification of printed words the active construction of larger units of meaning for example of sentences and the integration of the latter into memory so that a text can be understood and remembered The final chapter describes a new model of reading in its entirety and then reports simulations showing how it explains important findings related to reading

Computational Models of Mixed-Initiative Interaction Susan Haller, Susan McRoy, Alfred Kobsa, 2013-11-11 Computational Models of Mixed Initiative Interaction brings together research that spans several disciplines related to artificial intelligence including natural language processing information retrieval machine learning planning and computer aided instruction to account for the role that mixed initiative plays in the design of intelligent systems The ten contributions address the single issue of how control of an interaction should be managed when abilities needed to solve a problem are distributed among collaborating agents Managing control of an interaction among humans and computers to gather and assemble knowledge and expertise is a major challenge that must be met to develop machines that effectively collaborate with humans This is the first collection to specifically address this issue

interesting insights into the scope and nature of the problems concerned with the computational analysis and modelling of real spontaneous speech and expect that these works will not only form the basis of further developments in each field but also merge to form an integrated computational model of prosody for a better understanding of human processing of the complex interactions of the speech chain **Attention, Intention, and the Structure of Discourse** Barbara J.
