Computed Brain and Orbital Tomography Carlos F. Gonzalez, Charles B. Grossman, Enrique Palacios, 1976 **Computed Tomography in Intracranial Tumors** G.B. Bradac, E. Kazner, U. Büll, S. Wende, R. Fahlbusch, Th. Grumme, W. Lanksch, O. Stochdorph, K. Kretzschmar, W. Meese, J. Schramm, H. Steinhoff, 2012-12-06 The current book represents a distillation of the experience gained in diagnosis of intracranial tumors with computed X ray tomography at the University Hospitals of Berlin Mainz and München To what purpose Standard radiological techniques such as pneumoencephalography with lumbar puncture and cerebral arteriography with puncture of the common carotid artery are invasive procedures which entail a certain amount of risk as well as discomfort for the patient Furthermore diagnoses made with these procedures rely primarily on indirect signs of an intracranial space occupying lesion such as displacement of the air filled ventricles or of normal cerebral vessels Only a few types of tumor are demonstrated directly with these techniques In contrast computed tomography demonstrates the pathology directly in almost all cases and this with a minimum of risk and discomfort In addition normal intracranial structures are demonstrated so that the tumor's effect on its surroundings can be evaluated Today almost a decade after HOUNSFIELD'S revolutionary invention diagnosis of brain tumors without computed tomography is almost unthinkable if not in fact irresponsible Computed Tomography and Magnetic Resonance Tomography of Intracranial Tumors C. Claussen, R. Fahlbusch, R. Felix, T. Grumme, J. Heinzerling, J.R. Iglesias-Rozas, E. Kazner, K. Kretzschmar, M. Laniado, W. Lanksch, W. Müller-Forell, T.H. Newton, W. Schörner, G. Schroth, B. Schulz, O. Stochdorph, G. Sze, S. Wende, 2012-12-06 This book represents the second fully revised edition of the original volume published in 1982 Experience in neuroradiology has confirmed the outstanding value of computed tomography CT for the diagnosis of space occupying lesions within the skull and orbit It might be assumed then that the second edition of this book would simply represent a numerically expanded continuation of the popular first edition That is not the case however Advances in imaging techniques have prompted the creation of a new book whose expanded title reflects its more comprehensive nature The added illustrations the revised text and the expanded circle of editors and contributors document this Since publication of the first edition a new modality magnetic resonance imaging MRI has become an established neuroradiologic study We felt it was essential to include this new modality in our book and explore its capabilities as an adjunct or alternative to CT scanning Because of the high acquisition costs of MRI and the still small number of MR units currently in operation we have relied in part on images furnished by other institutions and private practitioners to whom we are indebted Many problems relating to MR both in terms of equipment and image interpretation have yet to be resolved There is no denying that we still have much to learn **Treatment of Hydrocephalus Computer Tomography** R. Wüllenweber, H. Wenker, M. Brock, M. Klinger, 2012-12-06 More than 40 years ago British and German neurosurgeons met in Berlin and Breslau to exchange their experiences to strengthen their friendly bonds and to enjoy the attractions of both cities

and their surroundings In 1960 a joint meeting of the Dutch and German societies took place in Rotterdam by invitation of the Nederlandse Vereniging van Neurochirurgen All who attended this meeting thankfully remember the great hospitality during these unforgettable days In 1970 by courtesy of the Society of British Neurological Surgeons German neurosurgeons had the pleasure to become acquainted with the great tradition of British sciences at one of the most famous places during the meeting in Cambridge These impressions were deepened by visits to other famous sources of British scientific tradition during the European Congress in Oxford in 1975 The critical distance sometimes necessary towards our own discipline is implicit in the major themes of this meeting Complications following shunting procedures for hydrocephalus have been discussed on the basis of the results of a cooperative study of some German neurosurgical departments The second main topic was problems and diagnostic errors in computer tomography The papers presented contain critical considerations about the findings obtained by this method as well as on its possibilities and limitations German neurosurgeons felt deeply indebted to their British and Dutch colleagues and wanted to return their kindness at this joint meeting in Berlin We hope that all participants will retain pleasant memories of the days in this city
