Computer Analysis Of Genetic Macromolecules: Structure, Function And Evolution Nikolay A Kolchanov, Hwa A Lim, 1994-03-29 Molecular biology and genetics are fast growing fields with significant results and findings being reported virtually every day. Raw data from the wet lab accumulate at an astonishing rate making it necessary to analyze the biological data with the use of computers. This book reveals how the current challenges of molecular biology and genetics are met with computer and mathematical treatments. A combined effort of the Computational Genetics and Biophysics Group, Supercomputer Computations Research Institute USA, the Theoretical Molecular Genetics Russian Academy of Sciences, Russia, and the Bioinformatics Group Consiglio Nazionale delle Ricerche Italy, many of these findings are firsthand discoveries made by these groups. The book emphasizes the fundamental principles of the structural functional organization of the 3 major classes of genetic macromolecules: DNA, RNA, and proteins. It also introduces universally applicable theoretical principles into the enormous realm of raw data and develops an integrative theoretical computer approach to the analysis of these macromolecules to gain insights into the complexities of their function and evolution. Electrophoresis, Supercomputing And The Human Genome - Proceedings Of The First International Conference Hwa A Lim, Charles R Cantor, 1991-03-01 The aim of the Conference and its proceedings is to provide a forum in which experts from both the academic and the industrial sectors, as well as other interested individuals, young researchers, and students can gain a first hand knowledge of the scope, direction, and future prospects in the international initiation of human genome research and its supporting technologies of electrophoresis and computing. **A Bibliography on Computational Molecular Biology and Genetics** Sarah Barron, Matthew Witter, Gongxian Liu, 1991 Provides a definitive bibliographic review of the literature related to DNA mapping and sequence analysis with a focus on computer and mathematical aspects of molecular biology and genetics. Over 2200 entries arranged by author's name. **Genetically Yours: Bioinforming, Biopharming And Biofarming** Hwa A Lim, 2002-03-28 Written by a pioneer and authority, this invaluable book covers all the key aspects and current affairs in the field of biotechnology with topics ranging from genome projects through animal and human cloning to biowarfare. As an academic turned entrepreneur, the author is at ease in providing vivid firsthand accounts from both the scientific and the business perspective. This book is addressed primarily to experts and professionals who are very busy but who wish to gain insights through a different and comprehensive perspective of this important field. It is also aimed at laypeople who are interested in learning more about bioinformatics and the biotechnology, pharmaceutical, and healthcare industries. The book is also ideal as an easy-to-read supplementary reference in classrooms. Each chapter is self-contained and footnotes provide further references for interested readers. **Genetically Yours** Hwa A.
