The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regrettably access to supercomputers remains limited for academic researchers Nonetheless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection

The International Conference of Computational Methods in Sciences and Engineering ICCMSE is unique in its kind It regroups original contributions from all fields of the traditional Sciences Mathematics Physics Chemistry Biology Medicine and all branches of Engineering The aim of the conference is to bring together computational scientists from several disciplines in order to share methods and ideas More than 370 extended abstracts have been submitted for consideration for presentation in ICCMSE 2004 From these 289 extended abstracts have been selected after international peer review by at least two independent reviewers      *New Computer Architectures* Jacques Tiberghien,1984      *Subject Catalog* Library of Congress,1982      *Current Issues in Expert Systems* Axel Lamsweerde,Pierre Dufour,1987

Early work in artificial intelligence was mainly concerned with general problem solving procedures The application of these procedures to large real world problems was at first unsuccessful Major

progress was later made by allowing the problem solving process to make use of separate explicit sources of knowledge concerning highly specific problem domains This gave rise to a first generation of expert knowledge based systems The next step was to improve the power and flexibility of the various knowledge processing techniques and to develop effective software and hardware architectures to implement them efficiently This major challenge remains at the core of many of the fifth generation computer projects
