Computer Modelling Of Social Processes:

Computer Modelling of Social Processes Wim B G Liebrand,Andrzej Nowak,Rainer Hegselmann,1998-07-29 This book introduces and the new computer based research methods for studying and modeling complex social phenomena It is the first coherent collection that surveys the impact that computer based methods have had on the social and behavioural sciences and illustrates the potential for future research The methods are presented in an accessible manner and do not assume any background in computer science The authors introduce each chapter and explain how computers can help to study social processes and each method is described in relation to a substantive issue to show how it can contribute to our understanding of complex problems The themes covered include computer simulation neural and social networks and the visualizat

Modelling and Simulation in the Social Sciences from the Philosophy of Science Point of View R. Hegselmann,Ulrich Mueller,Klaus G. Troitzsch,2013-03-09 Model building in the social sciences can increasingly rely on well elaborated formal theories At the same time inexpensive large computational capacities are now available Both make computer based model building and simulation possible in social science whose central aim is in particular an understanding of social dynamics Such social dynamics refer to public opinion formation partner choice strategy decisions in social dilemma situations and much more In the context of such modelling approaches novel problems in philosophy of science arise which must be analysed the main aim of this book Interest in social simulation has recently been growing rapidly world wide mainly as a result of the increasing availability of powerful personal computers The field has also been greatly influenced by developments in cellular automata theory from mathematics and in distributed artificial intelligence which provided tools readily applicable to social simulation This book presents a number of modelling and simulation approaches and their relations to problems in philosophy of science It addresses sociologists and other social scientists interested in formal modelling mathematical sociology and computer simulation as well as computer scientists interested in social science applications and philosophers of social science   **Technical Report** Human Resources Research Organization,1967

The A-Z of Social Research Robert Lee Miller,Robert L. Miller (MA.),John D Brewer,2003-04-22 Alphabetically arranged in accessible reader friendly format this collection of 94 entries provides a concise introduction to the key concepts and methods in social research   **Simulating Social Complexity** Bruce Edmonds,Ruth Meyer,2017-11-24 This volume examines all aspects of using agent or individual based simulation This approach represents systems as individual elements having their own set of differing states and internal processes The interactions between elements in the simulation represent interactions in the target systems What makes this social is that it can represent an observed society Social systems include all those systems where the components have individual agency but also interact with each other This includes human societies and groups but also increasingly socio technical systems where the internet based devices form the substrate for interaction These systems are central to our lives but are among the most complex known This poses particular problems for

those who wish to understand them The complexity often makes analytic approaches infeasible but on the other hand natural language approaches are also inadequate for relating intricate cause and effect This is why individual and agent based computational approaches hold out the possibility of new and deeper understanding of such systems This handbook marks the maturation of this new field It brings together summaries of the best thinking and practices in this area from leading researchers in the field and constitutes a reference point for standards against which future methodological advances can be judged This second edition adds new chapters on different modelling purposes and applying software engineering methods to simulation development Revised existing content will keep the book up to date with recent developments This volume will help those new to the field avoid reinventing the wheel each time and give them a solid and wide grounding in the essential issues It will also help those already in the field by providing accessible overviews of current thought The material is divided into four sections Introduction Methodology Mechanisms and Applications Each chapter starts with a very brief section called Why read this chapter followed by an abstract which summarizes the content of the chapter Each chapter also ends with a section on Further Reading Whilst sometimes covering technical aspects this second edition of Simulating Social Complexity is designed to be accessible to a wide range of researchers including both those from the social sciences as well as those with a more formal background It will be of use as a standard reference text in the field and also be suitable for graduate level courses **At the Crossroads: Lessons and Challenges in Computational Social Science** Javier Borge-Holthoefer,Yamir Moreno,Taha Yasseri,2016-11-29 The interest of physicists in economic and social questions is not new for over four decades we have witnessed the emergence of what is called nowadays sociophysics and econophysics vigorous and challenging areas within the wider Interdisciplinary Physics With tools borrowed from Statistical Physics and Complexity this new area of study have already made important contributions which in turn have fostered the development of novel theoretical foundations in Social Science and Economics via mathematical approaches agent based modelling and numerical simulations From these foundations Computational Social Science has grown to incorporate as well the empirical component aided by the recent data deluge from the Web 2 0 and 3 0 closing in this way the experiment theory cycle in the best tradition of Physics The Handbook of Social Psychology: Research methods Gardner Lindzey,Elliot Aronson,1968 *Main Trends in Social and Cultural Anthropology* Maurice Freedman,1979 **Simulation** ,1968 **Technology and Social Process** Brian Elliott,1988 **Sociological Abstracts** Leo P.
