*Artificial Behavior* Gene D. Steinhauer, 1986 Motivation and Intensionality in a Computer Simulation Model William S. Faught, Stanford University. Computer Science Department, 1977 This dissertation describes a computer simulation model of paranoia The model mimics the behavior of a patient participating in a psychiatric interview by answering questions introducing its own topics and responding to negatively valued e.g. threatening or shame producing situations The work focuses on the motivational mechanisms required to instigate and direct the modelled behavior Major components of the model are 1 A production system PS formalism accounting for the instigation and guidance of behavior as a function of internal affective and external real world environmental factors 2 A model of affects emotions as an anticipation mechanism based on a small number of basic pain pleasure factors and 3 a formalism for intensional behavior directed by internal models requiring a dual representation of symbol and concept An intensional object belief can be accessed either by sensing it in the environment concept or by its name token Similarly an intensional action intention can be specified either by its conditions in the immediate environment concept or by its name token Issues of intelligence psychopathological modelling and artificial intelligence programming are discussed The paranoid phenomenon is found to be explainable as an extremely skewed use of normal processes Applications of these constructs are found to be useful in AI programs dealing with error recovery incompletely specified input data and natural language specification of tasks to perform Computer Science in Social and Behavioral Science Education Daniel Edgar Bailey, 1978 *Computer Simulation of Human Game-playing Behavior* Jeffrey Richard Cantwell, 1984 Systems Modeling and Computer Simulation Naim Kheir, 2018-12-12 This second edition describes the fundamentals of modelling and simulation of continuous time discrete time discrete event and large scale systems Coverage new to this edition includes a chapter on non linear systems analysis and modelling complementing the treatment of of continuous time and discrete time systems and a chapter on the computer animation and visualization of

ROBY, Raymond S. Nickerson, TUFTS UNIV MEDFORD MASS.,1963 The general objective of the work to be described is to develop a simulation model to be used for investigating certain aspects of the performance of man machine systems The model will incorporate behavior and effectiveness of the human component ordinarily a small group or team and other parameters describing important properties of the task environment Assuming definite functional relations between these sets of parameters and specific numerical values it will attempt to predict the criterial performance of the total system      **Computer Simulation Studies on the Behavior of a Learning Organism** Albert Ernest Charles Allan,1971      ACM Transactions on Modeling and Computer Simulation ,2004      Bibliography of Computer Simulation of Human Behavior John M.
