## System or Boot Sector Virus

Infects the master boot record or boot sector, disrupting the system's ability to start up.

## File and Multipartite Virus

Targets and spreads through both boot sectors and executable files, causing damage on multiple fronts.

## Macro and Cluster Virus

Spreads by attaching macros to documents and clustering around file directories, infecting files when accessed.

## Stealth/Tunneling Virus

Evades detection by antivirus software by intercepting its calls to the operating system.

## Encryption Virus

Encrypts the files on a computer, often demanding a ransom to restore access.

## Sparse Infector Virus

Infects files infrequently or under certain conditions to avoid detection.

## Polymorphic Virus

This virus changes its code each time it infects, making it hard to detect with traditional signature-based methods.

## Metamorphic Virus

Completely rewrites its own code and structure to evade detection, making it very difficult to identify.

## Overwriting File or Cavity Virus

This virus destroys information by overwriting part of the file or finding empty space within files to insert itself without altering the file size.

## Companion/Camouflage Virus

This virus creates a new program to run alongside the intended program, misleading the system about which program to execute.

Computer Viruses. History, Reasons and Effects on Society Sirinya Pakditawan, 2006-08-11 Essay from the year 2002 in the subject English Language and Literature Studies Culture and Applied Geography grade 10 University of Hamburg Institut für Anglistik und Amerikanistik language English abstract Since the beginning of the internet age in the early 1980s people have not merely been concerned with keeping the internet free from viruses In point of fact some people wreak havoc on the internet by creating and spreading nasty and disastrous computer viruses Hence the so called hackers cause mayhem and destruction in the net It is a fact that computer viruses cause great damage because they can pass from one computer to another like a biological virus thus infecting the system Hence a computer virus can be regarded as the undesirable embodiment of human intelligence to interrupt and to create a vacuum in the constant flow of internet information What is more the history of the computer virus is laced with the human need to be recognized Thus many research projects show that

the majority of virus creators crave public acknowledgement However there are many other reasons why people try to spread computer viruses Nonetheless all hackers can be seen as dangerous and harmful being indifferent to the consequences of spreading viruses to themselves and to others In the following I will concentrate on the phenomenon of computer viruses Therefore I will focus on the reasons why computer viruses were brought to life discussing the history of the computer virus and the effects it has taken on our society It is a fact that hackers not only use viruses worms and Trojan horses to cause a loss of information but also to gain control over remote systems and the information stored on these systems For this reason I will not only concentrate on the way the virus affects our everyday life but also on the effects it has in the business sector
