Computers In Chemistry:

Chemistry by Computer Stephen Wilson, 2012-12-06 Computers have been applied to problems in chemistry and the chemical sciences since the dawn of the computer age however it is only in the past ten or fifteen years that we have seen the emergence of computational chemistry as a field of research in its own right Its practitioners computational chemists are neither chemists who dabble in computing nor programmers who have an interest in chemistry but computational scientists whose aim is to solve a wide range of chemical problems using modern computing machines This book gives a broad overview of the methods and techniques employed by the computational chemist and of the wide range of problems to which he is applying them It is divided into three parts The first part records the basics of chemistry and of computational science that are essential to an understanding of the methods of computational chemistry These methods are described in the second part of the book In the third part a survey is given of some areas in which the techniques of computational chemistry are being applied As a result of the limited space available in a single volume the areas covered are necessarily selective Nevertheless a sufficiently wide range of applications are described to provide the reader with a balanced overview of the many problems being attacked by computational studies in chemistry

Computers in Analytical Chemistry Charles H. Orr, 2012-12-06 The analytical chemist is in the forefront of the race to use computers in laboratory work The modern laboratory has a large number of instruments churning out information and mechanized procedures for handling the huge amount of data are imperative The marriage of instruments and computers is offered as a way of easing the burden on the scientist as well as optimizing the performance of the analytical instruments Computer systems can be

applied to all the major analytical instrument procedures and many of the leading instrument manufacturers are developing and producing systems for use in the laboratory both for data acquisition and for control purposes It is therefore timely that the session on computers in analytical chemistry of the Eastern Analytical Symposium held in November 1968 be published in this series which has as its aim progress in analytical chemistry The contents are wide ranging and include applications to mass spectrometry X ray spectrography nuclear magnetic resonance spectroscopy gas chromatography infrared spectrography the use of dedicated computers and the multiple user laboratory Thanks are due to the authors of the papers and to the session chairmen for their efforts in the production of this very worthwhile addition to the series
