Networking the Learner Deryn M. Watson,Jane Andersen,2013-11-11 Deryn Watson and Jane Andersen Editors INTRODUCTION The role of a Preface is to introduce the nature of the publication The book that emerges from an IFIP Technical Committee World Conference on Computers in Education is complex and this complexity lies in the nature of the event from which it emerges Unlike a number of other major international conferences those organised within the IFIP education community are active events A WCCE is unique among major international conferences for the structure that deliberately ensures that all attendees are active participants in the development of the debate In addition to the major paper presentations and discussion from international authors there are panel sessions and professional working groups who debate particular themes throughout the event There is no doubt that this was not a dry academic conference teachers lecturers and experts policy makers and researchers learners and manufacturers mingled and worked together to explore reflect discuss and plan for the future The added value of this event was that we know that it will have an impact on future practice networks will be formed both virtual and real ideas will change and new ones will emerge Capturing the essence of this event is a challenge this post conference book has three parts The first is the substantial number of theme papers

Computer Science in K-12 Shuchi Grover,2020-05 Coding teaches our students the essence of logical thinking and

problem solving while also preparing them for a world in which computing is becoming increasingly pervasive While there s excitement and enthusiasm about programming becoming an intrinsic part of K 12 curricula the world over there s also growing anxiety about preparing teachers to teach effectively at all grade levels This book strives to be an essential enduring practical guide for every K 12 teacher anywhere who is either teaching or planning to teach computer science and programming at any grade level To this end readers will discover An A to Z organization that affords comprehensive insight into teaching introductory programming 26 chapters that cover foundational concepts practices and well researched pedagogies related to teaching introductory programming as an integral part of K 12 computer science Cumulatively these chapters address the two salient building blocks of effective teaching of introductory programming what content to teach concepts and practices and how to teach pedagogy Concrete ideas and rich grade appropriate examples inspired by practice and research for classroom use Perspectives and experiences shared by educators and scholars who are actively practicing and or examining the teaching of computer science and programming in K 12 classrooms

The Computer as an Educational Tool Richard C. Forcier,Don E. Descy,2005 For Computers in Education and Instructional Technology courses This text describes the computer as a necessary classroom tool that not only empowers teachers to teach their students to use computers to solve problems but also shows teachers how to do the same The text explains technical matters in language that s understandable to the non computer savvy and includes numerous examples drawn from both PC Windows and Macintosh platforms The authors use problem solving models to clarify specific applications and incorporate national international standards to create a text that works across a broad educational spectrum The inspiration for this readable student friendly text is the idea that technology should be a means to an end not the focus of attention

How Computers Entered the Classroom, 1960-2000 Carmen Flury,Michael Geiss,2023-06-19 In the history of education the question of how computers were introduced into European classrooms has so far been largely neglected This edited volume strives to address this gap The contributions shed light on the computerization of education from a historical perspective by attending closely to the different actors involved such as politicians computer manufacturers teachers and students political rationales and ideologies as well as financial political or organizational structures and relations The case studies highlight differences in political and economic power as well as in ideological reasoning and the priorities set by different stakeholders in the process of introducing computers into education However the contributions also demonstrate that simple cold war narratives fail to capture the complex dynamics and entanglements in the history of computers as an educational technology and a subject taught in schools The edited volume

thus provides a comprehensive historical understanding of the role of education in an emerging digital society
