**Parallel Computational Fluid Dynamics '98** Chiao-ling Lin, P. Fox, A. Ecer, N. Satofuka, Jacques Periaux, 1999-05-26

This book contains the papers presented at the Parallel Computational Fluid Dynamics 1998 Conference. The book is focused on new developments and applications of parallel technology. Key topics are introduced through contributed papers and invited lectures. These include typical algorithmic developments such as distributed computing, domain decomposition, and parallel algorithms. Some of the papers address the evaluations of software and machine performance and software tool environments. The application of parallel computers to complex fluid dynamics problems are also conveyed through sessions such as DNS, LES, combustion, and reacting flows, industrial applications, water resources, and environmental flows. The editors believe this book will provide many researchers much beyond those contributing to this volume with fresh information and reference.

ECCOMAS primary mission is to promote the exchange of information between Research and Industry. This two volume work features the papers presented at the Fourth International Conference on Computational Fluid Dynamics in Athens, Greece and includes the proceedings, invited lectures, and special technological sessions.

**Frontiers Of Computational Fluid Dynamics 1998** David A. Caughey, Mohamed M. Hafez, 1998-11-20 The first volume of Frontiers of Computational Fluid Dynamics was published in 1994 and was dedicated to Prof. Antony Jameson. The present volume is dedicated to Prof. Earl L. Murman in appreciation of his original contributions to this field. The book covers the following topics: Transonic and Hypersonic Aerodynamics, Algorithm Developments and Computational Techniques, Impact of High Performance Computing, Applications in Aeronautics and Beyond, Industrial Perspectives, Engineering Education. The book contains 25 chapters written by leading researchers from academia, government laboratories, and industry.

**Computational Fluid Dynamics Review 1998**, 1998      *Computational Fluid Dynamics Review 1998 (In 2 Volumes)* Mohamed M. Hafez, Koichhi Oshima, 1998-11-20 The first volume of CFD Review was published in 1995. The purpose of this new publication is to present comprehensive surveys and review articles which provide up to date information about recent progress in computational fluid dynamics on a regular basis. Because of the multidisciplinary nature of CFD it is difficult to cope with all the important developments in related areas. There are at least ten regular international conferences dealing with different aspects of CFD. It is a real challenge to keep up with all these activities and to be aware of essential and fundamental contributions in these areas. It is hoped that CFD Review will help in this regard by covering the state of the art in this field. The present book contains sixty-two articles written by authors from the US, Europe, Japan, and China covering the

main aspects of CFD There are five sections general topics numerical methods flow physics interdisciplinary applications parallel computation and flow visualization The section on numerical methods includes grids schemes and solvers while that on flow physics includes incompressible and compressible flows hypersonics and gas kinetics as well as transition and turbulence This book should be useful to all researchers in this fast developing field
