Complex Systems Modeling and Simulation in Economics and Finance

Shu-Heng Chen, Ying-Fang Kao, Ragupathy Venkatachalam, Ye-Rong Du, 2018-11-20 This title brings together frontier research on complex economic systems heterogeneous interacting agents bounded rationality and nonlinear dynamics in economics The book contains the proceedings of the CEF2015 21st Computing in Economics in Finance held 20-22 June 2015 in Taipei Taiwan and addresses some of the important driving forces for various emergent properties in economies when viewed as complex systems The breakthroughs reported in this book are a result of an interdisciplinary approach and simulation remains the unifying theme for these papers as they deal with a wide range of topics in economics The text is a valuable addition to the efforts in promoting the complex systems view in economic science The computational experiments reported in the book are both transparent and replicable Complex System Modeling and Simulation in Economics and Finance is useful for graduate courses of complex systems with particular focus on economics and finance At the same time it serves as a good overview for researchers who are interested in the topic

Unlocking Economic Systems with Agent-Based

Computational Economics Vlasios Voudouris, 2008 Studies of economic systems must consider how to handle interdependent feedback interactions of micro behaviors interaction patterns and macroscopic regularities The Agent Field framework is an approach for agent based computational economics In this framework models of economic systems are viewed as a collection of multi scale and structured agents operating in indeterminate economic environments conceptualized as continuous differentiable fields with variable levels of spatial uncertainty We propose formalization of the Agent Field framework using the Unified Modeling Language We explore potential advantages and disadvantages of the framework for the study of economic systems using the EU leasing market This enables us to formulate an initial frame representation of major economic agents for the EU leasing market We predicted the direction of the Central and Eastern

cluster of Europe's high growth economies can be expected to take as its economies move towards higher prosperity levels. Within the scope of the work it has been shown that the Agent Field framework is an intuitive rather than an abstract process in modeling economic systems. This intuitive process needs more understanding of the interactions between the economic environment and the agents within it. The Agent Field approach seems ontologically well founded for the growing field of agent based computational economics.

Economic Multi Agent Systems Gottfried Haber, 2014-09-03. The relatively new scientific field of economic agent based systems is a promising but yet not completely developed area of economics at the frontier to business administration, computer sciences and the social sciences. This book follows a rather interdisciplinary approach while maintaining a focus on the economic dimension of agent based models. In contrast to other literature in this field, this book aims at developing a framework for modelling an economic system in the sense of a total model of the economy. The design and implementation of the agent based framework AS1 are described in detail. Some sample applications such as an analysis of the effects of the presence of different research institutes providing alternative inconsistent forecasts for the private agents provide an overview of the strengths of an agent based economic model. This 2nd edition is a reprint of the original Edition from 2006.

Behavioral Rationality and Heterogeneous Expectations in Complex Economic Systems Cars Hommes, 2013-01-24. Recognising that the economy is a complex system with boundedly rational interacting agents, the book presents a theory of behavioral rationality and heterogeneous expectations in complex economic systems and confronts the nonlinear dynamic models with empirical stylized facts and laboratory experiments. The complexity modeling paradigm has been strongly advocated since the late 1980s by some economists and by multidisciplinary scientists from various fields such as physics, computer science and biology. More recently, the complexity view has also drawn the attention of policy makers who are faced with complex phenomena, irregular fluctuations and sudden unpredictable market transitions. The complexity tools, bifurcations, chaos, multiple equilibria discussed in this book will help students, researchers and policy makers to build more realistic behavioral models with heterogeneous expectations to describe financial market movements and macro economic fluctuations in order to better manage crises in a complex global economy.

Computational Economics David A. Kendrick, P. Ruben Mercado, Hans M. Amman, 2006-01-08. The ability to conceptualize an economic problem verbally to formulate it as a mathematical model and then represent the mathematics in software so that the model can be solved on a computer is a crucial skill for economists. Computational Economics contains well known models and some brand new ones designed to help students move from verbal to mathematical to computational representations in economic modeling. The authors focus however is not just on solving the models but also on developing the

ability to modify them to reflect one's interest and point of view. The result is a book that enables students to be creative in developing models that are relevant to the economic problems of their times. Unlike other computational economics textbooks, this book is organized around economic topics among them macroeconomics, microeconomics, and finance. The authors employ various software systems including MATLAB, Mathematica, GAMS, the nonlinear programming solver in Excel, and the database systems in Access to enable students to use the most advantageous system. The book progresses from relatively simple models to more complex ones and includes appendices on the ins and outs of running each program. The book is intended for use by advanced undergraduates and professional economists and even as a first exposure to computational economics by graduate students. Organized by economic topics, progresses from simple to more complex models. Includes instructions on numerous software systems. Encourages customization and creativity.

Handbook of Computational Economics Leigh Tesfatsion, Kenneth L. Judd, 2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists. This handbook volume surveys recent research on Agent based Computational Economics (ACE), the computational study of economic processes modeled as dynamic systems of interacting agents. Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function. Topics covered include learning, empirical validation, network economics, social dynamics, financial markets, innovation and technological change, organizations, market design, automated markets and trading agents, political economy, social ecological systems, computational laboratory development, and general methodological issues. Every volume contains contributions from leading researchers. Each Handbook presents an accurate, self-contained survey of a particular topic. The series provides comprehensive and accessible surveys.

Computational Economics: Heterogeneous Agent Modeling Cars Hommes, Blake LeBaron, 2018-06-27 Handbook of Computational Economics Heterogeneous Agent Modeling Volume Four focuses on heterogeneous agent models emphasizing recent advances in macroeconomics including DSGE, finance, empirical validation, and experiments, networks, and related applications. Capturing the advances made since the publication of Volume Two, Tesfatsion and Judd (2006), it provides high-level literature with sections devoted to Macroeconomics, Finance, Empirical Validation, and Experiments, Networks, and other applications including Innovation Diffusion in Heterogeneous Populations, Market Design, and Electricity Markets, and a final section on Perspectives on Heterogeneity. Helps readers fully understand the dynamic properties of realistically rendered economic systems. Emphasizes detailed specifications of structural conditions, institutional arrangements, and behavioral dispositions. Provides broad assessments that can lead researchers to recognize new synergies and opportunities.

Programming Languages and Systems in Computational Economics and Finance Soren Bo Nielsen, 2012-12-06 The developments within the computationally and numerically oriented areas of Operations Research, Finance, Statistics, and

Economics have been significant over the past few decades. Each area has been developing its own computer systems and languages that suit its needs but there is relatively little cross fertilization among them yet. This volume contains a collection of papers that each highlights a particular system language model or paradigm from one of the computational disciplines aimed at researchers and practitioners from the other fields. The 15 papers cover a number of relevant topics: Models and Modelling in Operations Research and Economics; novel High level and Object Oriented approaches to programming through advanced uses of Maple and MATLAB and applications and solution of Differential Equations in Finance. It is hoped that the material in this volume will whet the reader's appetite for discovering and exploring new approaches to old problems and in the longer run facilitate cross fertilization among the fields. We would like to thank the contributing authors, the reviewers, the publisher and last but not least Jesper Saxtorph, Anders Nielsen and Thomas Stidsen for invaluable technical assistance.

Agent-Based Computational Economics Using NetLogo Romulus-Catalin Damaceanu, 2013-02-01. Agent based Computational Economics using NetLogo explores how researchers can create use and implement multi agent computational models in Economics by using NetLogo software platform. Problems of economic science can be solved using multi agent modelling MAM. This technique uses a computer model to simulate the actions and interactions of autonomous entities in a network in order to analyze the effects on the entire economic system. MAM combines elements of game theory, complex systems, emergence and evolutionary programming. The Monte Carlo method is also used in this e book to introduce random elements. The 11 models presented in this text simulate the simultaneous operations of several agents in an attempt to recreate and predict complex economic phenomena. This e book explains the topic in a systematic manner starting with an introduction for readers followed subsequently by methodology and implementation using NetLogo. The volume ends with conclusions based on the results of the experiments presented. The e book is intended as a concise and vital resource for economists, applied mathematicians, social sciences scientists, systems analysts, operations researchers and numerical analysts.

Proceedings of the Genetic and Evolutionary Computation Conference, 1999 **Computational Approaches to Economic Problems** Hans M. Amman, B. Rustem, Andrew B. Whinston, 2013-03-09. This volume contains a selection of papers presented at the first conference of the Society for Computational Economics held at ICC Institute Austin Texas May 21-24 1995. Twenty two papers are included in this volume devoted to applications of computational methods for the empirical analysis of economic and financial systems, the development of computing methodology including software related to economics and finance and the overall impact of developments in computing. The various contributions represented in the volume indicate the growing interest in the topic due to the increased availability of computational concepts and tools and the necessity of analyzing complex decision problems. The papers in this volume are divided into four sections: Computational methods in econometrics, Computational methods in finance, Computational methods for a social environment and New computational methods.
