## **Computational Methods For The Study Of Dynamic Economies:**

Computational Methods for the Study of Dynamic Economies European Economic Association. Summer School, 1999-03-04 This volume brings together leading contributors in the field of macroeconomics who explain how to implement the computational techniques needed to solve dynamic economics models The contributors cover a broad range of techniques *Computational Methods for the Study of Dynamic Economies* Ramon Marimon, Andrew Scott, 2001

Computational Methods for the Study of Dynamic Economies Ramon Marimon, Andrew Scott, 1999-03-04 Macroeconomics increasingly uses stochastic dynamic general equilibrium models to understand theoretical and policy issues Unless very strong assumptions are made understanding the properties of particular models requires solving the model using a computer This volume brings together leading contributors in the field who explain in detail how to implement the computational techniques needed to solve dynamic economics models A broad spread of techniques are covered and their application in a wide range of subjects discussed The book provides the basics of a toolkit which researchers and graduate students can use to solve and analyse their own theoretical models **Dynamic General Equilibrium Modeling** Burkhard Heer, Alfred Maussner, 2011-10-20 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models In order to solve these models economists need to use many mathematical tools This book presents various methods in order to compute the dynamics of general equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail In particular the book discusses issues that are often neglected in existing work on computational methods e g how to find a good initial value In part II the authors discuss methods in order to solve heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the business cycle or the overlapping generations model In an accompanying home page to this book computer codes to all applications can be downloaded Dynamic General Equilibrium Modelling Burkhard Heer, Alfred Maussner, 2005-12-05 Modern business cycle theory and growth theory uses stochastic dynamic general equilibrium models Many mathematical tools are needed to solve these models The book presents various methods for computing the dynamics of general equilibrium models In part I the representative agent stochastic growth model is solved with the help of value function iteration linear and linear quadratic approximation methods parameterised expectations and projection methods In order to apply these methods fundamentals from numerical analysis are reviewed in detail Part II discusses methods for solving heterogeneous agent economies In such economies the distribution of the individual state variables is endogenous This part of the book also serves as an introduction to the modern theory of distribution economics Applications include the dynamics of the income distribution over the

business cycle or the overlapping generations model Through an accompanying home page to this book computer codes to all applications can be downloaded [Dynamic Economic Analysis](#) Gerhard Sorger,2015-02-12 Concise yet rigorous this textbook provides a clear and systematic introduction to the theory and application of dynamic economic models *Journal of Economic Dynamics & Control* ,2002 **Numerical Methods in Economics** Kenneth L. Judd,2023-04-04 To harness the full power of computer technology economists need to use a broad range of mathematical techniques In this book Kenneth Judd presents techniques from the numerical analysis and applied mathematics literatures and shows how to use them in economic analyses The book is divided into five parts Part I provides a general introduction Part II presents basics from numerical analysis on  $R^n$  including linear equations iterative methods optimization nonlinear equations approximation methods numerical integration and differentiation and Monte Carlo methods Part III covers methods for dynamic problems including finite difference methods projection methods and numerical dynamic programming Part IV covers perturbation and asymptotic solution methods Finally Part V covers applications to dynamic equilibrium analysis including solution methods for perfect foresight models and rational expectation models A website contains supplementary material including programs and answers to exercises [Index of Conference Proceedings](#) British Library. Document Supply Centre,1999 **Journal of Economics** ,2004 *Computational Methods in Economic Dynamics* Herbert Dawid,Willi Semmler,2011-03-23 This volume is centered around the issue of market design and resulting market dynamics The economic crisis of 2007 2009 has once again highlighted the importance of a proper design of market protocols and institutional details for economic dynamics and macroeconomics Papers in this volume capture institutional details of particular markets behavioral details of agents decision making as well as spillovers between markets and effects to the macroeconomy Computational methods are used to replicate and understand market dynamics emerging from interaction of heterogeneous agents and to develop models that have predictive power for complex market dynamics Finally treatments of overlapping generations models and differential games with heterogeneous actors are provided **Monetary and Economic Studies** ,2011 **Development Economics and Structuralist Macroeconomics** Amitava Krishna Dutt,Jaime Ros,2003 Comprises 20 essays on development planning macroeconomics of development stabilization policy and the global economy **The American Economic Review** ,1999 Includes papers and proceedings of the annual meeting of the American Economic Association Covers all areas of economic research **Computational Techniques for Modelling Learning in Economics** Thomas Brenner,2012-12-06 Computational Techniques for Modelling Learning in Economics offers a critical overview of the computational techniques that are frequently used for modelling learning in economics It is a collection of papers each of which focuses on a different way of modelling learning including the techniques of evolutionary algorithms genetic programming neural networks classifier systems local interaction models least squares learning Bayesian learning boundedly rational models and cognitive learning models Each paper describes the technique it uses gives an example of its applications and discusses the advantages

and disadvantages of the technique Hence the book offers some guidance in the field of modelling learning in computation economics In addition the material contains state of the art applications of the learning models in economic contexts such as the learning of preference the study of bidding behaviour the development of expectations the analysis of economic growth the learning in the repeated prisoner s dilemma and the changes of cognitive models during economic transition The work even includes innovative ways of modelling learning that are not common in the literature for example the study of the decomposition of task or the modelling of cognitive learning
