

- **Plane surface.** This is the simplest surface. It requires three non-coincident points to define an infinite plane.

- **Ruled (lofted) surface.** This is a linear surface. It interpolates linearly between two boundary curves that define the surface (rails). Rails can be any wireframe entity. This entity is ideal to
- **represent surfaces that do not have any twists or kinks.**

- **Surface of revolution.** This is an axisymmetric surface that can model axisymmetric objects. It is generated by rotating a planar wireframe entity in space about the axis of symmetry a certain angle.
