Personalized Orthopedics Osiris Canciglieri Junior, Miroslav D. Trajanovic, 2022-05-25 This book covers the most important topics in the field of personalized orthopedics It starts with the 3D geometry of the bones focusing on the problem of reverse engineering of the bones It also shows the application of a 3D geometric model of bone for the design of personalized implants and prostheses This book covers the application of additive technologies in personalized orthopedics as well as prediction simulation and optimization in personalized orthopedics Its content provides the necessary knowledge for the transition from classical to personalized orthopedics The authors present an original method

for reverse bone engineering the Method of Anatomical Features MAF This method is unique as it enables the reconstruction of the original geometry and topology of the bone even when only data on its part are available The application of this method is shown on the examples of human long bones mandible and hip bone reconstruction This book contains a review of several real cases of personalized implants It gives several examples of prostheses for the design of which a 3D model of bones was used as well as other patient data on the basis of which personalized prostheses were designed

Navigation and MIS in Orthopedic Surgery James B. Stiehl, Werner H. Konermann, Rolf G. Haaker, A.M. DiGioia, 2007-02-15 The reader is enthusiastically encouraged to tackle this second edition text in two ways The first is simply to scan chapters with their introductions summaries and conclusion points Second is to delve into those sections of seeming greater interest depending upon one's specialty and role The expansion and quality of this material speak to the success of the first edition by these editors and many similar authors In addition the continued and enlarged interest in computer assisted Orthopedic surgery indicates the relevance and enduring importance of this advance in our field of musculoskeletal surgery I suggest that no other discipline in surgery is so appropriately suited to computer assistance including robotic performance Orthopedics has always seemed unique to this author in that it focuses more than any other medical field on gross physical mechanical structure We deal nearly exclusively in physical repair of broken elements rearrangement of deformed ones and resurfacing or refurbishing those that are diseased in a way that has altered their mechanical integrity shapes and other structural aspects
