

5 components of information systems

1

Hardware is the tangible technology used to manage data. Examples include computers, smartphones, and their components.

2

Software is the intangible programming that directs hardware and enables users to perform specific tasks.

3

Data sources house data that can be retrieved, manipulated, and analyzed to make decisions. Examples include databases and data warehouses.

4

Telecommunications refers to the pathways through which devices and software can send data to each other.

5

Not *everything* can be handled by robots—**human expertise** (provided by data analysts and other experts) is crucial for improving processes.
