Computing A Second Course:

The Tao of Computing, Second Edition Henry M. Walker, 2012-07-06 Describing both the practical details of interest to students and the high level concepts and abstractions highlighted by faculty The Tao of Computing Second Edition presents a comprehensive introduction to computers and computer technology This edition updates its popular predecessor with new research exercises and expanded discussion questions It uses a question and answer format to provide thoughtful answers to the many practical questions that students have about computing Among the questions answered the book explains What capabilities computers have in helping people solve problems and what limitations need to be considered Why machines act the way they do What is involved in getting computers to interact with networks The book offers a down to earth overview of fundamental computer fluency topics from the basics of how a computer is organized and an overview of operating systems to a description of how the Internet works The second edition describes new technological advances including social media applications and RSS feeds

Computer Supported Collaborative Learning 2005 Timothy Koschmann, 2017-10-03 The Computer Supported Collaborative Learning CSCL conference has become an internationally recognized forum for the exchange of research findings related to learning in the context of collaborative activity and the exploration of how such learning might be augmented through technology This text is the proceedings from CSCL 2005 held in Taipei Taiwan This conference marked the 10th anniversary of the first CSCL Conference held at Indiana University in 1995 Subsequent meetings have been held at the University of Toronto Stanford University University of Maastricht Netherlands University of Colorado at Boulder and the University of Bergen Norway Just as the first CSCL conference was instrumental in shaping the trajectory of the field in its first decade the conference in Taipei will play an important role in consolidating an increasingly international and interdisciplinary community and defining the direction of the field for the next 10 years This volume and the papers from which it is comprised will be an important resource for those active in this area of research and for others interested in fostering learning in settings of collaboration

Computing: a Second Course Fred Gruenberger, 1971 This work assumes the readers has completed an introductory course in computing and run several small problems The aim here has been to furnish a suitable text for the student who seeks further contact with computers but who does not intend to become a professional in the field

Learner-Centered Design of Computing Education Mark Guzdial, 2022-05-31 Computing education is in enormous demand Many students both children and adult are realizing that they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn't just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone
