Computing Perspectives:

Computing Perspectives Maurice V. Wilkes, 2014-06-28 In this insightful collection of essays Maurice Wilkes shares his unique perspective on the development of computers and the current state of the art. These enlightening essays discuss the foundational ideas behind modern computing and provide a solid grounding for the appreciation of emerging computer technologies. Wilkes, one of the founders of computing, has provided enormous contributions to the development of computers, including the design and construction of the EDSAC computer and early development of programming for a stored program computer. He was responsible for the concept of microprogramming. Wilkes also wrote the first paper to appear on cache memories and was an early worker in the field of wide bandwidth local area networks. In 1992 he was awarded the prestigious Kyoto Prize for Advanced Technology. These essays will be of interest to everyone involved with computers and how they arrived at their present state. Wilkes presents his perspectives with keen historical sensibility and engineering practicality. Readers are invited to consider these observations and form their own perspectives on the present state of the computer art. Computing Perspectives Maurice Wilkes, 1991

A Small Matter of Programming Bonnie A. Nardi, 1993-07-15 *A Small Matter of Programming* asks why it has been so difficult for end users to command programming power and explores the problems of end user driven application development that must be solved to afford end users greater computational power. Drawing on empirical research on existing end user systems, *A Small Matter of Programming* analyzes cognitive, social, and technical issues of end user programming. In particular, it examines the importance of task specific programming languages, visual application frameworks, and collaborative work practices for end user computing, with the goal of helping designers and programmers understand and better satisfy the needs of end users who want the capability to create, customize, and extend their applications software. The ideas in the book are based on the author's research on two successful end user programming systems: spreadsheets and CAD systems, as well as other

empirical research Nardi concentrates on broad issues in end user programming especially end users strengths and problems introducing tools and techniques as they are related to higher level user issues Bonnie A Nardi is a Member of the Technical Staff at Hewlett Packard Laboratories

Heterogeneous Computing Mohamed Zahran,2019-05-29 If you look around you will find that all computer systems from your portable devices to the strongest supercomputers are heterogeneous in nature The most obvious heterogeneity is the existence of computing nodes of

different capabilities e.g. multicore GPUs, FPGAs. But there are also other heterogeneity factors that exist in computing systems like the memory system components interconnection etc. The main reason for these different types of heterogeneity is to have good performance with power efficiency. Heterogeneous computing results in both challenges and opportunities. This book discusses both. It shows that we need to deal with these challenges at all levels of the computing stack from algorithms all the way to process technology. We discuss the topic of heterogeneous computing from different angles: hardware challenges, current hardware state of the art, software issues, how to make the best use of the current heterogeneous systems and what lies ahead. The aim of this book is to introduce the big picture of heterogeneous computing. Whether you are a hardware designer or a software developer, you need to know how the pieces of the puzzle fit together. The main goal is to bring researchers and engineers to the forefront of the research frontier in the new era that started a few years ago and is expected to continue for decades. We believe that academics, researchers, practitioners, and students will benefit from this book and will be prepared to tackle the big wave of heterogeneous computing that is here to stay.
