Autonomic Ganglia:

Clinical Neuroanatomy Richard S. Snell, 2010 Organized classically by system this popular text gives medical and health professions students a complete clinically oriented introduction to neuroanatomy Each chapter begins with clear objectives includes clinical cases and ends with clinical notes clinical problem solving and review questions Hundreds of full color illustrations diagnostic images and color photographs enhance the text This Seventh Edition features new information relating the different parts of the skull to the brain areas expanded coverage of brain development and neuroplasticity and updated information on stem cell research A companion Website includes the fully searchable text and 454 USMLE style review questions with answers and explanations **Pharmacology of Ganglionic Transmission** D.A.

Kharkevich, 2012-12-06 D A KHARKEVICH The history of the study of ganglionic substances begins with the paper of LANGLEY and DICKINSON 1889 who established the ability of nicotine to block the neurones in the superior cervical ganglion This was a considerable discovery as the authors ascertained that impulses were transmitted from pre to postganglionic neurones in the autonomic ganglia Simultaneously they indicated the possibility of pharmacological influence upon interneuronal transmission in autonomic ganglia The idea of ganglionic receptors specifically sensitive to nicotine followed logically Later LANGLEY 1905 1906 considered the problem of receptors with respect to neuro effector synapses It is remarkable that he was one of the first to put forward the theory of chemical mediation of excitation the nervous impulse should not pass from nerve to muscle by an electric discharge but by the secretion of a special substance at the end of the nerve LANGLEY 1906 p 183 In addition LANGLEY JOHN N LANGLEY 1852 1926 D A KHARKEVICH 2 and his collaborators managed to define the topography of autonomic ganglia more precisely by means of nicotine It should be mentioned that it was he who introduced the terms autonomic nervous system and parasympathetic nervous system *Physiology of the Gastrointestinal Tract* Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10 FROM THE PREFACE The original purpose of the First Edition of *Physiology of the Gastrointestinal Tract* to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters

on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Fayez K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field

Advances in General and Cellular Pharmacology Toshio Narahashi, C. Paul Bianchi, 2012-12-06 Knowledge of the mechanism of action of drugs at cellular subcellular or molecular levels is of vital importance not only in giving the basis of interpretation of the systemic action of drugs but also in improving existing drugs in designing new forms of drugs and in giving the basis of therapeutic applications Classical pharmacology concerning the action of drugs at integrated levels does not necessarily give sufficient information as to the mechanism of action of drugs A variety of sophisticated concepts utilizing the methods of physics chemistry biophysics biochemistry and physiology must be synthesized to understand the mechanism of action Only since the last decade however have these techniques been fully applied to pharmacological investigations It is of utmost importance to realize that a new dimension of pharmacological research has indeed emerged as a result of such a multidisciplinary approach this approach is encompassed in general and cellular pharmacology Such recent studies of drug actions have led to a number of important findings Certain chemicals and drugs were found to possess highly specific actions on cellular functions so that they are widely being used as powerful tools for the study of a variety of physiological and pharmacological problems Our knowledge of the cellular mechanisms of drug action has provided the basis for interpreting the systemic effects of the drugs and insight into the molecular mechanism involved
