### Carotid and aortic baroreceptors

In response to an increase in blood pressure, carotid and aortic baroreceptors:

- a. Send afferent signals to the brainstem, which then attempts to reduce blood pressure via peripheral vasodilation
- b. Increase vagal parasympathetic drive to the heart, which leads to relative bradycardia

4

### Symptoms and signs above the level of the lesion:

- Headache
- Relative bradycardia
- Flushing
- Sweating
- Blurred vision
- Nasal congestion

2

### Sympathetic response (T6-L2)

A noxious stimulus below the level of the lesion sends signals via afferent sensory nerves to the spinal cord. This triggers a sympathetic response (from T6 to L2)

1

### Triggers below the level of the lesion

- The 6 Bs:
- Bladder
- Bowel
- Back passage
- Bones
- Boils
- Babies

5

### Symptoms and signs below the level of the lesion:

- Hypertension
- Pallor
- Cool skin
- Piloerection

## **Autonomic Dysfunction After Spinal Cord Injury:**

**Autonomic Dysfunction After Spinal Cord Injury** Lynne C. Weaver, Canio Polosa, 2005-10-11 Autonomic dysfunction is a major and poorly understood consequence of spinal cord injury. It is a cause of very serious disability and requires much more research. It should be a focus of treatment strategies. This book will be of interest to anyone involved in research and treatment of spinal cord injury since it helps to explain the tremendously negative impact on the body caused by cord injury that is not as obvious as paralysis and loss of sensation. It contains a compilation of what is known about bladder, cardiovascular, bowel, and sexual dysfunction after spinal cord injury as it relates to the changes within the autonomic nervous system control of these functions. The book begins with a description of the time course of autonomic dysfunctions and their ramifications from the first hours after a spinal cord injury to the more stable chronic states. The next section contains three chapters that address anatomical findings that may provide some of the foundation for autonomic dysfunctions in many of the systems. The system-specific chapters then follow in four sections. Each section begins with a chapter or two defining the clinical problems experienced by people with cord injury. The following chapters present research, basic and clinical, that address the autonomic dysfunctions.

**The Neuroscience of Spinal Cord Injury** Rajkumar Rajendram, Victor R. Preedy, Colin R. Martin, 2022-05-27 Diagnosis and Treatment of Spinal Cord Injury will enhance readers' understanding of the complexities of the diagnosis and management of spinal cord injuries. Featuring chapters on drug delivery, exercise, and rehabilitation, this volume discusses in detail the impact of the clinical features, diagnosis, management, and long-term prognosis of spinal cord injuries on the lives of those affected. The book has applicability for neuroscientists, neurologists, clinicians, and anyone working to better understand spinal cord injuries. Spinal injury affects about 10 million people annually worldwide, impacting on the family unit and causing lifelong disabilities with varied symptoms including paresthesia, spasticity, loss of motor control, and often severe pain.

**Cellular, Molecular, Physiological, and Behavioral Aspects of Spinal Cord Injury** will enhance readers' understanding of the biological and psychological effects of spinal cord injury. Featuring chapters on gene expression, metabolic effects, and behavior, this volume discusses in detail the impact of spinal cord injury to better understand the underlying pathways and processes. The book has applicability for neuroscientists, neurologists, clinicians, and anyone working to better understand these injuries.

**Diagnosis and Treatment of Spinal Cord Injury** covers both the diagnosis and treatment of spinal cord injury. Contains chapter abstracts, key facts, dictionary, and summary points to aid in understanding. Features chapters on epidemiology and pain. Includes MRI usage, biomarkers, and stem cell and gene therapy for management of spinal cord injury. Discusses pain reduction, drug delivery, and rehabilitation.

**Cellular, Molecular, Physiological, and Behavioral Aspects of Spinal Cord Injury** summarizes the neuroscience of spinal cord injury, including cellular and molecular biology. Contains chapter abstracts, key facts, dictionary, and summary points to aid in understanding. Features chapters on signaling and hormonal events. Includes plasticity and gene expression. Examines health and stress.

*Cardiovascular Disease Risk After Spinal Cord Injury* Henrike Joanna Cornelie Ravensbergen, 2013 Cardiovascular disease CVD is the leading cause for mortality and morbidity after spinal cord injury SCI with an earlier onset and more rapid progression compared to the general population Lifestyle changes after injury have

been suggested to be the main contributor to CVD risk but I proposed that the issue is more complicated Although less well known autonomic function is affected by SCI in addition to motor and sensory dysfunction Cardiovascular autonomic dysfunction is a particular concern in individuals with high lesions above T5 due to the possible disruption of descending spinal sympathetic pathways to the heart and main vascular resistance bed In this thesis I propose that cardiovascular autonomic impairment plays a role in the elevated CVD risk The thesis starts with an evaluation of the prevalence and progression of cardiovascular dysfunction after SCI Then the contribution of autonomic dysfunction on CVD risk is investigated In addition markers for obesity related CVD risk specific to individuals with SCI and ECG markers for cardiac arrhythmias in relation to autonomic impairments are explored Prevalence of cardiovascular dysfunction was found not to improve over time after injury and it was highest in those with lesions above T5 The second study showed that autonomic dysfunction contributes to overall CVD risk and specifically to glucose intolerance either directly or through an interaction with physical activity levels The data showed that waist circumference is the best marker for obesity considering ability to detect adiposity and CVD risk and practicality of use A specific cut off for waist circumference was found to be lower compared to the general recommendations The final study showed increased values for the ECG markers Tpeak Tend variability P wave variability and QTVI only in those with impairments to descending cardiac sympathetic pathways The ECG characteristics may be indicative of susceptibility to cardiac arrhythmia related to autonomic dysfunction Implications of these findings are that management of cardiovascular autonomic dysfunction should remain a priority into the chronic phase of injury not merely due the direct impact on quality of life but also due to its contribution to the elevated cardiovascular disease risk after SCI
