## **Autonomic Neuroeffector Mechanisms:**

Autonomic Neuroeffector Mechanisms Geoffrey Burnstock, Charles H. V Hoyle, 1992 *The Encyclopedia of Molecular Biology* Sir John Kendrew, 2009-07-06 The Encyclopaedia of Molecular Biology is a truly unique work of reference 6000 definitions cover the entire spectrum of molecular life science The complete one volume guide to understanding the way molecular biology is transforming medicine and agriculture Long and short entries written by over 300 of the world's finest researchers For rapid research or detailed study this is the A to Z of the New Biology Neuroeffector Mechanisms of the Autonomic Nervous System Asa G. H. Blakeley, 1965 The Nervous System and the Heart Gert J. Ter Horst, 1999-12-29 Gert Ter Horst and a panel of recognized experts illuminate the complexities and importance of heart brain and brain heart interactions in human health These distinguished authorities critically review what is known about autonomic control of the heart hypothalamo pituitary adrenal modulation heart pain modulation by humoral factors and the relationship between cognitive neuropsychiatric disorders and heart disease Highly relevant and up to date The Nervous System and the Heart offers the first comprehensive treatment of the important mutual interactions of the heart and the brain By integrating specialist knowledge in cardiology with that from neuroscience this important book constitutes a brilliant guide to today's novel approaches to neural control of the heart and consequent reduction of cardiovascular mortality **Innervation of the Gastrointestinal Tract** Simon Brookes, Marcello Costa, 2002-06-27 The long tube that makes up the gastrointestinal tract is composed of a variety of tissue types and is the largest internal organ of the body Its main function is to digest food and absorb the released nutrients Furthermore it is subdivided into functionally distinct regions that each mediate one of a variety of actions upon the food consumed in Encyclopedia of Neuroscience, Volume 1 Larry R. Squire, 2009-06-12 The Encyclopedia of the Neuroscience explores all areas of the discipline in its focused entries on a wide variety of topics in neurology neurosurgery psychiatry and other related areas of neuroscience Each article is written by an expert in that specific domain and peer reviewed by the advisory board before acceptance into the encyclopedia Each article contains a glossary introduction a reference section and cross references to other related encyclopedia articles Written at a level suitable for university undergraduates the breadth and depth of coverage will appeal beyond undergraduates to professionals and academics in related fields **Textbook of the Neurogenic Bladder** Jacques Corcos, David Ginsberg, Gilles Karsenty, 2015-08-03 The editors of this comprehensive third edition of the Textbook of the Neurogenic Bladder have assembled an impressive team of world specialists to develop an essential resource for physicians continence specialists and other health care professionals involved in the diagnosis and management of patients who have lost normal bladder function The book Airways Smooth Muscle David Raeburn, Mark A. Giembycz, 2013-03-09 Many factors may influence the release of neurotransmitters from airway nerves 1 This is likely to be important in physiological control of airway functions and may be particularly relevant in airway diseases such as asthma and chronic obstructive pulmonary disease COPD Neural elements in

airways interact in a complex manner and the activation of certain neural pathways may profoundly influence the release of transmitters from other neural pathways Similarly inflammatory mediators released from inflammatory cells in the airways may also modulate neurotransmitter release There are marked differences between species in airway innervation and in neuromodulatory effects and wherever possible studies in human airways have been emphasised although information on neuromodulation in human airways is somewhat limited at present Release of neurotransmitters from nerve terminals occurs via a Ca<sup>2+</sup> dependent secretion evoked by a nerve action potential but may also be evoked experimentally by a high extracellular K concentration which directly depolarises the nerve terminal membrane Modulation refers to the alteration of neurotransmitter release which may either be increased facilitation or reduced inhibition by the action of a particular agent thus changing the magnitude of the neurally mediated response Such agents would normally act on receptors on the nerve terminal which are referred to as pre junctional or presynaptic receptors in contrast to post junctional or post synaptic receptors located on the target cells which are influenced by that particular transmitter
