Reading, Language, and Literacy Fran Lehr, Jean Osborn, 2012-10-12 The impetus for this book emerged from a conference that brought together publishers and reading researchers and educators for the purpose of examining the best available research evidence about what we know and what we have yet to learn about the teaching of reading and about how children learn to read The goal of the conference was to contribute to a sound research base upon which to develop classroom practices that will ensure that every American child will become fully literate Because the field is still so deeply divided over the best ways to translate belief into classroom practice the editors decided to highlight rather than gloss over these divisions It is hoped that the papers in this volume will promote thought and discussion that will lead to action in improving reading instruction for children now and into the new century

The Mind on Paper David R. Olson, 2016-11-07 Although the importance of literacy is widely acknowledged in society and remains at the top of the political agenda writing has been slow to establish a place in the cognitive sciences Olson argues that to understand the cognitive implications of literacy it is necessary to see reading and writing as providing access to and consciousness of aspects of language such as phonemes words and sentences that are implicit and unconscious in speech Reading and writing create a system of metarepresentational concepts that bring those features of language into consciousness as a subject of discourse This consciousness of language is essential not only to acquiring literacy but also to the formation of systematic thought and rationality The Mind on Paper is a compelling exploration of what literacy does for our speech and hence for our thought and will be of interest to readers in developmental psychology cognitive science linguistics and education
