Autonomous Agents:

Programming Game AI by Example Mat Buckland, 2005 This book describes in detail many of the AI techniques used in modern computer games explicitly shows how to implement these practical techniques within the framework of several game developers with a practical foundation to game AI

Autonomous Agents Alfred R. Mele, 1995-08-03 This book addresses two related topics self control and individual autonomy In approaching these issues Mele develops a conception of an ideally self controlled person and argues that even such a person can fall short of personal autonomy He then examines what needs to be added to such a person to yield an autonomous agent and develops two overlapping answers one for compatibilist believers in human autonomy and one for incompatibilists While remaining neutral between those who hold that autonomy is compatible with determinism and those who deny this Mele shows that belief that there are autonomous agents is better grounded than belief that there are not

Readings in Agents Michael N. Huhns, Munindar P. Singh, 1998 This book collects the most significant literature on agents in an attempt to forge a broad foundation for the field Includes papers from the perspectives of AI databases distributed computing and programming languages The book will be of interest to programmers and developers especially in Internet areas

Understanding Agent Systems Mark d'Inverno, Michael Luck, 2013-12-20 Around ten years ago when we were both PhD students working on different but related aspects of artificial intelligence we shared an office in the furthest corner of the Department of Computer Science at University College London Our friendship began then but our professional collaboration only really got going when we both left one of us moving the few yards to the University of Westminster and the other further afield to the University of Warwick and later the University of Southampton Nevertheless we can trace back many of our inspirations to those days at UCL in discussions with Derek Long John Campbell Maria Fox and John Wolstencroft who all contributed to our initial enthusiasm for working in this area On leaving UCL however we tried to bring our research interests together in the newly emerging area of agent based systems but found difficulties in communication with each other over basic terms and concepts simply due to the immaturity of the field In other words the problems we had in finding a base on which to develop our ideas set us on a long path over a number of years resulting in our construction and refinement of a conceptual framework within which to define analyse and explore different aspects of agents and multi agents systems This is the work reported in this book

Artificial Life Christopher G. Langton, 1997 This book brings together a series of overview articles that appeared in the first three issues of the groundbreaking journal *Artificial Life*

Agent-Based Computational Economics Shu-Heng Chen, 2017-09-19 This book aims to answer two questions that are fundamental to the study of agent based economic models what is agent based computational economics and why do we need agent based economic modelling of economy This book provides a review of the development of agent based computational economics ACE from a perspective on how artificial economic agents are designed under the influences of complex sciences experimental economics artificial intelligence evolutionary biology

psychology anthropology and neuroscience This book begins with a historical review of ACE by tracing its origins From a modelling viewpoint ACE brings truly decentralized procedures into market analysis from a single market to the whole economy This book also reviews how experimental economics and artificial intelligence have shaped the development of ACE For the former the book discusses how ACE models can be used to analyse the economic consequences of cognitive capacity personality and cultural inheritance For the latter the book covers the various tools used to construct artificial adaptive agents including reinforcement learning fuzzy decision rules neural networks and evolutionary computation This book will be of interest to graduate students researching computational economics experimental economics behavioural economics and research methodology

Intelligent Systems and Applications Yaxin Bi,Rahul Bhatia,Supriya Kapoor,2019-08-23 The book presents a remarkable collection of chapters covering a wide range of topics in the areas of intelligent systems and artificial intelligence and their real world applications It gathers the proceedings of the Intelligent Systems Conference 2019 which attracted a total of 546 submissions from pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer review process after which 190 were selected for inclusion in these proceedings As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made it possible to tackle a host of problems more effectively This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for an international conference as a venue for reporting on the latest innovations and trends This book collects both theory and application based chapters on virtually all aspects of artificial intelligence presenting state of the art intelligent methods and techniques for solving real world problems along with a vision for future research it represents a unique and valuable asset

Organismal Agency Jana Švorcová,2024-05-09 This book explores the notion of organismal agency from the perspective of both philosophy and biology The two sections of the book delve into parallel themes including distinctions between organic and inorganic nature self organization autonomy self presentation memory umwelt and environmental influence The philosophical part focuses on the influential thinkers who shaped our perception of living entities beyond mere mechanisms It scrutinizes the concepts of organism and nature in the works of Aristotle Kant Schelling and various processualists Each chapter explores facets of their ideas that directly or indirectly foreshadowed or contributed to the formulation of the concept of agency The biological part of the book investigates various concepts associated with agency such as experience meaning attribution and phenotypic plasticity as well as reproduction organisational constraints modularity development of integrated phenotypes organismal choices or self representation through animal organisation In essence this work offers a comprehensive examination of organismal agency and its philosophical and biological foundations Collaboratively authored by individuals from several institutions this publication caters primarily to researchers and students working at the intersection of philosophy and biology

Proportionality, Balancing, and Rights Jan-R.

Sieckmann,2021-08-12 The book focuses on Robert Alexy s theory of constitutional rights Alexy systematically presented the theory in his seminal book *Theorie der Grundrechte* 1985 Engl translation *Theory of Constitutional Rights* 2002 and continued to develop it in numerous subsequent articles Arguably still the most influential theory of constitutional rights it has found widespread academic support as well as recognition in several constitutional jurisdictions On the other hand it has also been the object of considerable criticism The aim of this book is to outline the central aspects of Alexy s theory as he sees them and to further develop the principles of constitutional fundamental and human rights by applying a constructive criticism of his theory

hierarchy of natural purpose has served to mystify women's nature and thereby justify restricting women to a predetermined social stratum Addressing issues that concern not only feminism but legal theory as well she defends her views on equality and universalization against a growing postmodern critique and presents rights theory as an alternative to an ethics of responsibility based on Aristotelian notions of friendship and trust Through tightly constructed arguments presented in engaging prose Pierce conveys her deep knowledge of legal philosophy and her passion for rights as she takes on such issues as AIDS gay marriage animal liberation and feminist separatism She combats the prevailing view of Plato as sexist and explores Sartre's views of holes and slime She also examines the work of contemporary authors in ecology biology sociobiology and religion to reveal their reliance on nature for ethical conclusions and she criticizes recent efforts to root a feminist natural law in Thomism With natural law concepts now in fashion with many conservatives and even some Supreme Court justices Pierce's essays offer a necessary perspective on where current legal and ethical thinking is headed

Real-Time Search for Learning Autonomous Agents Toru Ishida, 1997-06-30 Autonomous agents or multiagent systems are computational systems in which several computational agents interact or work together to perform some set of tasks These systems may involve computational agents having common goals or distinct goals Real Time Search for Learning Autonomous Agents focuses on extending real time search algorithms for autonomous agents and for a multiagent world Although real time search provides an attractive framework for resource bounded problem solving the behavior of the problem solver is not rational enough for autonomous agents The problem solver always keeps the record of its moves and the problem solver cannot utilize and improve previous experiments Other problems are that although the algorithms interleave planning and execution they cannot be directly applied to a multiagent world The problem solver cannot adapt to the dynamically changing goals and the problem solver cannot cooperatively solve problems with other problem solvers This book deals with all these issues Real Time Search for Learning Autonomous Agents serves as an excellent resource for researchers and engineers interested in both practical references and some theoretical basis for agent multiagent systems The book can also be used as a text for advanced courses on the subject
