

AVERSIVE CONDITIONING

Aversive conditioning occurs when a negative reinforcement (aka aversive stimulus) disincentivizes repetition of an undesirable target behavior.

OVERVIEW

The goal in aversive conditioning is to create a negative association with the unwanted behavior, eventually leading to its extinction. Commonly used in treating addictions or phobias, aversive conditioning can be an effective technique for behavior modification when used appropriately. However, it can also have negative side effects that need to be carefully considered.

EXAMPLES

- **Speeding Tickets:** Getting a speeding ticket when driving over the speed limit is a type of financial punishment meant to decrease unlawful behavior.
- **Rubber-band Snapping:** Whenever a person recognizes that an unwanted impulse or thought has occurred, they snap a rubber-band on their wrist.
