

Math 782: Analytic Number Theory (Instructor's Notes)*

Analytic Versus Elementary:

- Terminology (Analytic Number Theory makes use of Complex Analysis and Elementary Number Theory does not; but it isn't so simple to distinguish.)

- Writing an integer as a sum of two squares. This is the first of a few examples of how Complex Analysis can be used to answer a question seemingly unrelated to it: if a and b are sums of 2 squares, why must ab be also?

- Coverings. A covering of the integers is a system of congruences $x \equiv a_j \pmod{m_j}$ such that every integer satisfies at least one of these congruences. A perfect covering is one in which each integer satisfies exactly one of the congruences. Suppose we have a finite perfect covering of the integers with each modulus $m_j > 1$. Show that the largest modulus occurs twice. Use that

$$\frac{1}{1-z} = \sum_{j=1}^r \frac{z^{a_j}}{1-z^{m_j}} \quad \text{for } |z| < 1,$$

where $1 < m_1 \leq m_2 \leq \dots \leq m_r$ and $0 \leq a_j < m_j$. Suppose that $m_{r-1} \neq m_r$. Then the right-hand side, and not the left-hand side, gets large (in absolute value) as z approaches $\exp(2\pi i/m_r)$. The contradiction implies $m_{r-1} = m_r$.

- Preliminaries on exponentials. The following are useful formulas:

$$\sum_{j=0}^{n-1} e^{i(2\pi k/n)j} = \begin{cases} 0 & \text{if } k \neq 0 \\ n & \text{if } k = 0, \end{cases}$$

$$\int_0^1 e^{i2\pi k\theta} d\theta = \frac{1}{2\pi} \int_0^{2\pi} e^{ik\theta} d\theta = \begin{cases} 0 & \text{if } k \neq 0 \\ 1 & \text{if } k = 0. \end{cases}$$

- Putnam Problem A-6, 1985. If $p(x) = a_0 + a_1x + \dots + a_nx^n$ is a polynomial with real coefficients a_j , then set $\Gamma(p(x)) = a_0^2 + a_1^2 + \dots + a_n^2$. Let $f(x) = 3x^2 + 7x + 2$. Find, with proof, a polynomial $g(x)$ with real coefficients such that (i) $g(0) = 1$, and (ii) $\Gamma(f(x)^n) = \Gamma(g(x)^n)$ for all positive integers n .

There are perhaps better ways to do this problem, but we use what we just learned to establish

$$\Gamma(p(x)) = \int_0^1 p(e^{2\pi i\theta}) p(e^{-2\pi i\theta}) d\theta.$$

Note that $f(x) = (3x+1)(x+2)$. That $g(x) = 6x^2 + 5x + 1 = (3x+1)(2x+1)$ provides a solution follows from

$$\Gamma(f(x)^n) = \int_0^1 f(e^{2\pi i\theta})^n f(e^{-2\pi i\theta})^n d\theta$$

Abstract Analytic Number Theory:

Abstract Analytic Number Theory John Knopfmacher, 1990-01-01 John Knopfmacher 1937-99 was a Professor of Mathematics at the University of the Witwatersrand in Johannesburg South Africa

Analytic Number Theory: An Introductory Course Paul Trevor Bateman, Harold G Diamond, 2004-09-07 This valuable book focuses on a collection of powerful methods of analysis that yield deep number theoretical estimates Particular attention is given to counting functions of prime numbers and multiplicative arithmetic functions Both real variable elementary and complex variable analytic methods are employed The reader is assumed to have knowledge of elementary number theory abstract algebra will also do and real and complex analysis Specialized analytic techniques including transform and Tauberian methods are developed as needed Comments and corrigenda for the book are found at www.math.uiuc.edu/diamond

Abstract Analytic Number Theory John Knopfmacher, 1975

Abstract analytic number theory Knopfmacher, 2009-02-04 North Holland Mathematical Library Volume 12 Abstract Analytic Number Theory focuses on the approaches methodologies and principles of the abstract analytic number theory The publication first deals with arithmetical semigroups arithmetical functions and enumeration problems Discussions focus on special functions and additive arithmetical semigroups enumeration and zeta functions in special cases infinite sums and products double series and products integral domains and arithmetical semigroups and categories satisfying theorems of the Krull Schmidt type The text then ponders on semigroups satisfying Axiom A asymptotic enumeration and statistical properties of arithmetical functions and abstract prime number theorem Topics include asymptotic properties of prime divisor functions maximum and minimum orders of magnitude of certain functions asymptotic enumeration in certain categories distribution functions of prime independent functions and approximate average values of special arithmetical functions The manuscript takes a look at arithmetical formations additive arithmetical semigroups and Fourier analysis of arithmetical functions including Fourier theory of almost even functions additive abstract prime number theorem asymptotic average values and densities and average values of arithmetical functions over a class The book is a vital reference for researchers interested in the abstract analytic number theory

Advanced Analytic Number Theory: L-Functions Carlos J. Moreno, 2005 Since the pioneering work of Euler Dirichlet and Riemann the analytic properties of L functions have been used to study the distribution of prime numbers With the advent of the Langlands Program L functions have assumed a greater role in the study of the interplay between Diophantine questions about primes and representation theoretic properties of Galois representations This book provides a complete introduction to the most significant class of L functions the Artin Hecke L functions associated to finite dimensional representations of Weil groups and to automorphic L functions of principal type on the general linear group In addition to establishing functional equations growth estimates and non vanishing theorems a thorough presentation of the explicit formulas of Riemann type in the context of Artin Hecke and automorphic L functions is also given The survey is aimed

at mathematicians and graduate students who want to learn about the modern analytic theory of L functions and their applications in number theory and in the theory of automorphic representations The requirements for a profitable study of this monograph are a knowledge of basic number theory and the rudiments of abstract harmonic analysis on locally compact abelian groups
