Abstract Compositional Analysis Of Iterated Relations A Structural Approach To Complex State Transition Systems:

Abstract Compositional Analysis of Iterated Relations Frédéric Geurts,2000 **Abstract Compositional Analysis of Iterated Relations** Frederic Geurts,2014-10-08 **Abstract Compositional Analysis of Iterated Relations** Frederic Geurts,2003-06-26 This self contained monograph is an integrated study of generic systems defined by iterated relations using the two paradigms of abstraction and composition This accommodates the complexity of some state transition systems and improves understanding of complex or chaotic phenomena emerging in some dynamical systems The main insights and results of this work concern a structural form of complexity obtained by composition of simple interacting systems representing opposed attracting behaviors This complexity is expressed in the evolution of composed systems their dynamics and in the relations between their initial and final states the computation they realize The theoretical results are validated by analyzing dynamical and computational properties of low dimensional prototypes of chaotic systems high dimensional spatiotemporally complex systems and formal systems **Semantic Integration of Heterogeneous Software**

Specifications Martin Große-Rhode,2013-03-09 In a model based development of software systems different views on a system are elaborated using appropriate modeling languages and techniques Because of the unavoidable heterogeneity of the viewpoint models a semantic integration is required to establish the correspondences of the models and allow checking of their relative consistency The integration approach introduced in this book is based on a common semantic domain of abstract systems their composition and development Its applicability is shown through semantic interpretations and compositional comparisons of different specification approaches These range from formal specification techniques like process calculi Petri nets and rule based formalisms to semiformal software modeling languages like those in the UML family
