Abstract Data Types:

Data Structures with Abstract Data Types and Pascal Daniel F. Stubbs, Neil W. Webre, 1989 *Abstract Data Types*
Nell Dale, Henry M. Walker, 1996 Since 1985 Nell Dale's texts have helped shape the way computer science is taught Now she and Henry Walker an accomplished instructor and author in his own right are proposing a new focus for the junior senior level data structures course A timely response to the prevalence of object oriented programming this new text expands the focus of the advanced data structures course to examine not only the structure of a data object but also its type This new focus gives students the opportunity to look at data objects from the point of view of both user and implementer **Abstract Data Types and Algorithms** Manoochchr Azmoodeh, 1990-11-30 Intended as a second course on programming with data structures this book is based on the notion of an abstract data type which is defined as an abstract mathematical model with a defined set of operations Bibliography on Abstract Data Types B. Kutzler, F. Lichtenberger, 2012-12-06 Sponsored by the sterr Fonds zur F rderung der Wissenschaftlichen Forschung project nr P4567 **Program Correctness Over Abstract Data Types, with Error-state Semantics** John V. Tucker, Jeffery I. Zucker, 1988 Straight line programs While programs Recursive programs Computability in an abstract setting Bibliography **Introduction to Abstract Data Types Using ADA** Bruce Hillam, 1994 Designed for C52 or Data Structures course using Ada The movement away from Pascal as the introductory programming language and the re emergence of Ada makes this text timely Outstanding reviews of coverage of recursion narrative and style considered informative and motivating Fundamentals of Algebraic Specification 2 Hartmut Ehrig, Bernd Mahr, 1989-12-28 Since the early seventies concepts of specification have become central in the whole area of computer science Especially algebraic specification techniques for abstract data types and software systems have gained considerable importance in recent years They have not only played a central role in the theory of data type specification but meanwhile have had a remarkable influence on programming language design system architectures and software tools and environments The fundamentals of algebraic specification lay a basis for teaching research and development in all those fields of computer science where algebraic techniques are the subject or are used with advantage on a conceptual level Such a basis however we do not regard to be a synopsis of all the different approaches and achievements but rather a consistently developed theory Such a theory should mainly emphasize elaboration of basic concepts from one point of view and in a rigorous way reach the state of the art in the field We understand fundamentals in this context as 1 Fundamentals in the sense of a carefully motivated introduction to algebraic specification which is understandable for computer scientists and mathematicians 2 Fundamentals in the sense of mathematical theories which are the basis for precise definitions constructions results and correctness proofs 3 Fundamentals in the sense of concepts from computer science which are introduced on a conceptual level and formalized in mathematical terms Abstract Data Types and Modula-2 Richard Mitchell, 1992 Contains explanations of what abstract data types are and how to specify them and of the connection between

abstract data types and program components The book does assume a knowledge of Modula 2 although some of the difficulties of using opaque types are discussed before they are used Testing of Communicating Systems Dieter Hogrefe,Anthony Wiles,2003-05-08 This book constitutes the refereed proceedings of the 15 IFIP International Conference on Testing of Communicating Systems TestCom 2003 held in Sophia Antipolis France in May 2003 The 19 revised full papers presented together with three invited contributions were carefully reviewed and selected from 53 submissions The papers are organized in topical section on next generation networks IP and UMTS TTCN 3 automata based test methodology and test design tools and methodology Java for Artists Rick Miller,Raffi Kasparian,2006 Java For Artists The Art Philosophy and Science of Object Oriented Programming is a Java programming language text tradebook that targets beginner and intermediate Java programmers Computer Science Illuminated Nell Dale,John Lewis,2009-11 Revised and updated with the latest information in the field the Fourth Edition of Computer Science Illuminated continues to engage and enlighten students on the fundamental concepts and diverse capabilities of computing Written by two of today s most respected computer science educators Nell Dale and John Lewis the text provides a broad overview of the many aspects of the discipline from a generic view point Separate program language chapters are available as bundle items for those instructors who would like to explore a particular programming language with their students The many layers of computing are thoroughly explained beginning with the information layer working through the hardware programming operating systems application and communication layers and ending with a discussion on the limitations of computing Perfect for introductory computing and computer science courses the fourth edition s thorough presentation of computing systems provides computer science majors with a solid foundation for further study and offers non majors a comprehensive and complete introduction to computing Multi-Agent Systems and Applications Michael Luck,2001-06-20 This book presents selected tutorial lectures given at the summer school on Multi Agent Systems and Their Applications held in Prague Czech Republic in July 2001 under the sponsorship of ECCAI and Agent Link The 20 lectures by leading researchers in the field presented in the book give a competent state of the art account of research and development in the field of multi agent systems and advanced applications The book offers parts on foundations of MAS social behaviour meta reasoning and learning and applications Java Collections David A. Watt,Deryck F. Brown,2001-03-30 A unique practical approach to working with collection classes in Java 2 Software developers new to Java will find the practical software engineering based approach taken by this book extremely refreshing With an emphasis more on software design and less on theory Java Collections explores in detail Java 2 collection classes helping programmers choose the best collection classes for each application they work on Watt and Brown explore abstract data types ADTs that turn up again and again in software design using them to provide context for the data structures required for their implementation and the algorithms associated with the data structures Numerous worked examples several large case studies and end of chapter exercises are also provided A Systematic Catalogue of Reusable

Abstract Data Types Jürgen Uhl, Hans A. Schmid, 1990-10-24 This book presents a comprehensive catalogue of elementary data types like sets maps orders trees and lists written in Ada Such data types are often used in systems programming The major focus is on a uniform syntactic and semantic interface for all data types many implementation variants per data type all accessible through a single interface a hierarchical system of the data types as a basis for data type selection and implementation Meeting these goals is the main achievement of the book The combination of efficient applicability and ease of learning and maintenance is achieved by the carefully elaborated interfaces of the catalogue s data types These interfaces combine abstraction which is necessary for easy learning and for leaving implementation freedom and functional completeness which is an essential prerequisite for high performance in different application contexts The selection of the right data type implementation for a given context is supported by the data type hierarchy which imposes different abstraction levels and an orthogonal scheme of implementation variants which can be freely combined Together with the uniformity of interfaces the hierarchical composition of the catalogue leads to a small code base from which different implementation variants are generated using a macro processor

Abstract Data Types and Algorithms Manoochehr Azmoodeh, 1988

Abstract Data Types in Standard ML Rachel Harrison, 1993-08-27 Abstract Data Types in Standard ML Rachel Harrison University of Southampton UK This book presents a thorough treatment of data abstraction within a functional framework The approach to abstract data types strikes a balance between the theoretical and the practical stressing the importance of producing reliable high quality code which is robust and reusable Exercises are provided as well as numerous annotated algorithms in Standard ML Emphasis is placed on the key concepts of specification modularity and generality Each chapter shows how to specify apply and implement generic abstract data types and the specifications are used to verify and validate the correctness of the implementations Students of software engineering will find this book particularly attractive for courses such as advanced programming program design algorithms and data structures and program specification It will also serve as a useful post introductory text for courses on functional programming

Proceedings of the Fourth Working Conference on Reverse Engineering, October 6-8, 1997, Amsterdam, the Netherlands Ira Baxter, Alexander E. Quilici, Christiaan Verhoef, 1997 This text covers the 4th Working Conference on Reverse Engineering WCRE 97 It concentrates on the subject of software design and development and is suitable for students professors researchers and other computing professionals

Abstract Data Types in Modula-2 Rachel Harrison, 1989-11-24 A formal accessible approach to abstract data types employing the Modula 2 computer language Chapters follow a common format the need for a particular abstract data type is considered followed by the type s properties the access procedure to manipulate it the axioms which govern its behavior and implementations A wide variety of abstract data types are covered supported by numerous Modula 2 algorithms Code is written in a functional recursive style

Data Abstraction and Problem Solving with C++ Frank M.

Carrano,1995 This work provides novice and professional programmers with a bridge from traditional programming methods to the object oriented techniques available in C It clearly explains encapsulation and C classes which are then used throughout to implement abstract data types such as lists stacks queues trees and tables Inheritance polymorphism templates and operator overloading are explained both conceptually and through examples The work offers early extensive coverage of recursion and uses the technique through many examples and exercises It sets out to provide a firm foundation in data abstraction emphasizing the distinction between specification and implementation
