

Minority Students and College Success

It has been a popular misconception that minority students especially the African-American and Hispanics have no interest in pursuing a college degree nor are they likely to be successful in it. Asian-Americans, although still considered as a minority seem to be categorized in terms of college success in the same level as whites because they have consistently been high achievers in school. Statistics in the high school level show that African Americans and Hispanics are more likely to drop out of high school, perform very poorly and keep repeating the year until they just leave school, moreover, there is this numbers game in the how minority students perform in standardized tests in math, science and reading which had for the longest time been averse to the minority students. The assumption is that fewer minority students finish high school; hence fewer of them end up pursuing a college degree.

As we all know college education in the country is very expensive and even if whites and Asian-Americans are able to finish high school not everyone of them go to college, most have to support themselves and end up working and taking classes at night. A recent study by the American Council of Education (2006) have surveyed the number of minority students in college and compared it to the enrollment rates of whites and Asian-Americans. Their findings have reported that 18.6 percent of African-Americans and 22.7 percent of Hispanics enrolled in college with degrees in science, technology and mathematics which is almost equal to the enrollment rates of white students (18%) and Asian-Americans (26.

4%) in the same college degrees. The study also found that at their third year of college, the enrollment rate for African-Americans and Hispanics was 56 percent to the 57 percent of whites and Asian-Americans. The difference however is that there are less minority students who complete their degrees in the prescribed four years because of financial difficulties, juggling working more hours and studying full time, which consequently led to fewer earned credits than their white and Asian-American counterparts. This report have dispelled the popular notion that minority students does not have the ambition and drive to finish college, and I would like to be part of those who will prove this stereotype to be wrong. I am determined to pursue college and work hard to finish it within the prescribed years of study and if push comes to shove, I would rather stay on and complete it even if it will take me six years or more than just quit.

I believe in education and having a degree opens more doors for me than anything I could think of, not wealth, popularity or power. Academic Success And The College Minority Student:

Academic Success and the College Minority Student Michael Harlan Washington, Linda Dixon, 1986 The Academic Achievement of Minority Students Sheila T. Gregory, 2000-01-19 Throughout the world students of color experience failure in school for a variety of very complex reasons They often do not receive the proper encouragement from teachers they may lack the motivation necessary to excel in an academic environment they usually face a number of demographic socioeconomic and cultural factors that work against them or their academic performance may not be measured properly With contributions from scholars living in the U S and abroad The Academic Achievement of Minority Students is a comprehensive work that provides fresh insights and practical strategies for addressing these problems in order to enhance minority student performance in school The papers in this volume collectively cover the many issues affecting minority students from kindergarten through post secondary education including the instructional and nonacademic factors that promote achievement or lead to attrition Most importantly the authors offer valuable prescriptions for advancing the learning opportunities of all students in the future

Minority Student Retention Alan Seidman, 2019-05-23 Student retention continues to be a vexing problem for all colleges and universities In spite of the money spent on creating programs and services to help retain students until they achieve their academic and personal goals and graduate the figures have not improved over time This is particularly true for minority students who have a greater attrition rate than majority students Demographic information shows that the minority population in the United States is growing at a faster rate than the majority It is imperative that educational institutions find ways to help improve retention rates for all students but particularly minority students Retention rates should not differ appreciably among different racial ethnic groups The Journal of College Student Retention Research Theory and Practice is the only scholarly peer reviewed journal devoted solely to college student retention It has published many articles on minority student retention and this topic continues to garner much attention This book is a compilation of the very best of these articles selected on the basis of reviews by a cadre of experts in the education field The articles discuss African American Latino Latina Asian and Asian Pacific Native American and biracial students and institutional commitments to retaining a diverse student population For those interested in this vital area the collection will teach and inspire them to achieve greater heights and pay additional attention to retaining minority students in our colleges and universities

Diversity-related Experiences and Academic Performance Among Ethnic Minority College Students Amabda K. Blume,2016 Students of color experience numerous educational disadvantages compared to White students These disadvantages begin in elementary school and continue into college and adulthood Ethnic minority students typically have less resources available to them than White students and are typically less prepared for college0 4academically and financially Once students of color enroll in college they face additional barriers due

to discrimination and negative attitudes towards diversity. These factors play a key role in student engagement and persistence. The campus racial climate of a university, defined as the overall racial environment of the campus, has been shown to strongly influence students' feelings of belonging to an institution. This study examined the links among experiences of discrimination, campus openness to diversity, multicultural experiences, academic success, and feelings of school belonging for students of color in order to identify ways in which we can improve the educational experiences of disadvantaged students. The current study found evidence that many diversity-related experiences, such as cross-racial interactions, campus racial climate, cocurricular diversity activities, and discrimination, strongly influenced feelings of school belonging for students of color. These findings add support to previous research that suggests that diversity experiences on college campuses play a significant role in making students feel welcome at an institution. However, diversity-related experiences examined in this study appeared to have little correlation to academic performance and retention. School belonging did not correlate with academic performance. It seems students' grades may be better explained by internal factors like motivation rather than external factors like the campus environment. Perceptions of more negative cross-racial interactions and more discrimination experiences were linked with more negative perceptions of the campus racial climate. Campus racial climate was linked to students' desire to pursue higher education in the future. As the amount of positive cross-racial interactions students experienced increased, so did the amount of negative cross-racial interactions. This suggests that higher levels of cross-racial interactions result in both positive and negative experiences. More cross-racial interactions and cocurricular diversity activities were associated with more experiences of discrimination. This suggests that students of color are likely to experience discrimination when interacting with persons of different racial backgrounds or engaging in conversations related to diversity. Overall, diversity-related experiences linked to feelings of school belonging more than academic performance. Findings provide guidance for college-based initiatives to improve campus racial climates in order to create more welcoming environments for students of color.
