This volume contains the Proceedings of the conference Complex and Differential Geometry 2009 held at Leibniz Universit t Hannover September 14 18 2009 It was the aim of this conference to bring specialists from differential geometry and complex algebraic geometry together and to discuss new developments in and the interaction between these fields

Correspondingly the articles in this book cover a wide area of topics ranging from topics in classical algebraic geometry through complex geometry including holomorphic symplectic and poisson geometry to differential geometry with an emphasis on curvature flows and topology

Algebraic Geometry over the Complex Numbers Donu Arapura,2012-02-10

This is a relatively fast paced graduate level introduction to complex algebraic geometry from the basics to the frontier of the subject It covers sheaf theory cohomology some Hodge theory as well as some of the more algebraic aspects of algebraic geometry The author frequently refers the reader if the treatment of a certain topic is readily available elsewhere but goes into considerable detail on topics for which his treatment puts a twist or a more transparent viewpoint His cases of exploration and are chosen very carefully and deliberately The textbook achieves its purpose of taking new students of complex algebraic geometry through this a deep yet broad introduction to a vast subject eventually bringing them to the forefront of the topic via a non intimidating style

Complex Geometry and Lie Theory James A. Carlson,Charles Herbert Clemens,David R.

Morrison,1991 In the late 1960s and early 1970s Phillip Griffiths and his collaborators undertook a study of period mappings and variation of Hodge structure The motivating problems which centered on the understanding of algebraic varieties and the algebraic cycles on them came from algebraic geometry However the techiques used were transcendental in nature drawing heavily on both Lie theory and hermitian differential geometry Promising approaches were formulated to fundamental questions in the theory of algebraic curves moduli theory and the deep interaction between Hodge theory and algebraic cyles Rapid progress on many fronts was made in the 1970s and 1980s including the discovery of important connections to other fields including Nevanlinna theory integrable systems rational homotopy theory harmonic mappings intersection cohomology and superstring theory This volume contains thirteen papers presented during the Symposium on Complex Geometry and Lie Theory held in Sundance Utah in May 1989 The symposium was designed to review twenty years of interaction between these two fields concentrating on their links with Hodge theory The organizers felt that the time was right to examine once again the large issues of understanding the moduli and cycle theory of higher dimensional varieties which was the starting point of these developments The breadth of this collection of papers indicates the continuing growth and vitality of this area of research Several survey papers are included which should make the book a valuable resource for graduate students and other researchers who wish to learn about the field With contributions from some of the field s top researchers this volume testifies to the breadth and vitality of this area of research

Algebraic Geometry Spencer

Bloch, Igor V. Dolgachev, William Fulton, 1991 **Analysis and Geometry in Several Complex Variables** Gen
 Komatsu, Masatake Kuranishi, 2012-12-06 This volume consists of a collection of articles for the proceedings of the 40th
 Taniguchi Symposium Analysis and Geometry in Several Complex Variables held in Katata Japan on June 23 28 1997 Since
 the inhomogeneous Cauchy Riemann equation was introduced in the study of Complex Analysis of Several Variables there
 has been strong interaction between Complex Analysis and Real Analysis in particular the theory of Partial Differential
 Equations Problems in Complex Analysis stimulate the development of the PDE theory which subsequently can be applied to
 Complex Analysis This interaction involves Differential Geometry for instance via the CR structure modeled on the induced
 structure on the boundary of a complex manifold Such structures are naturally related to the PDE theory Differential
 Geometric formalisms are efficiently used in settling problems in Complex Analysis and the results enrich the theory of
 Differential Geometry This volume focuses on the most recent developments in this interaction including links with other
 fields such as Algebraic Geometry and Theoretical Physics Written by participants in the Symposium this volume treats
 various aspects of CR geometry and the Bergman kernel projection together with other major subjects in modern Complex
 Analysis We hope that this volume will serve as a resource for all who are interested in the new trends in this area We would
 like to express our gratitude to the Taniguchi Foundation for generous financial support and hospitality We would also like to
 thank Professor Kiyosi Ito who coordinated the organization of the symposium *Prospects in Complex Geometry* Junjiro
 Noguchi, Takeo Ohsawa, 2006-11-14 In the Teichmüller theory of Riemann surfaces besides the classical theory of quasi
 conformal mappings various approaches from differential geometry and algebraic geometry have merged in recent years
 Thus the central subject of Complex Structure was a timely choice for the joint meetings in Katata and Kyoto in 1989 The
 invited participants exchanged ideas on different approaches to related topics in complex geometry and mapped out the
 prospects for the next few years of research *Algebraic Geometry and its Applications* Alexander Tikhomirov, Andrej
 Tyurin, 2012-12-06 This volume consists of articles presented as talks at the Algebraic Geometry Conference held in the State
 Pedagogical Institute of Yaroslavl from August 10 to 14 1992 These conferences in Yaroslavl have become traditional in the
 former USSR now in Russia since January 1979 and are held at least every two years The present conference the eighth one
 was the first in which several foreign mathematicians participated From the Russian side 36 specialists in algebraic geometry
 and related fields invariant theory topology of manifolds theory of categories mathematical physics etc were present As well
 modern directions in algebraic geometry such as the theory of exceptional bundles and helices on algebraic varieties moduli
 of vector bundles on algebraic surfaces with applications to Donaldson's theory geometry of Hilbert schemes of points twistor
 spaces and applications to string theory as more traditional areas such as birational geometry of manifolds adjunction theory
 Hodge theory problems of rationality in the invariant theory topology of complex algebraic varieties and others were
 represented in the lectures of the conference In the following we will give a brief sketch of the contents of the volume In the

paper of W L Baily three problems of algebro geometric nature are posed They are connected with hermitian symmetric tube domains In particular the 27 dimensional tube domain Fe is treated on which a certain real form of E_7 acts which contains a nice arithmetic subgroup $r e$ as observed earlier by W Baily

Current Topics in Complex Algebraic Geometry Charles Herbert Clemens, Janos Kollár, 1995 The 1992-93 academic year at the Mathematical Sciences Research Institute was devoted to complex algebraic geometry This volume collects survey articles that arose from this event which took place at a time when algebraic geometry was undergoing a major change The editors of the volume Herbert Clemens and Janos Kollár chaired the organizing committee This book gives a good idea of the intellectual content of the special year and of the workshops Its articles represent very well the change of direction and branching out witnessed by algebraic geometry in the last few years
