**Phillip Griffiths, Joseph Harris**

## **Complex Geometry:**

Complex Geometry Daniel Huybrechts, 2005 Easily accessible Includes recent developments Assumes very little knowledge of differentiable manifolds and functional analysis Particular emphasis on topics related to mirror symmetry SUSY Kaehler Einstein metrics Tian Todorov lemma *Singularities and Complex Geometry* Qikeng Lu, 1997 This book presents the proceedings of the joint U S China Seminar on Singularity and Complex Geometry held at the Institute of Mathematics of the Chinese Academy Beijing in June 1994 This was the first gathering of Chinese and American mathematicians working in these fields several Japanese mathematicians also took part The volume covers a wide range of problems in areas such as CR manifolds value distribution theory of holomorphic curves topology of the complements of algebraic plane curves with singularities and arrangements topology of non isolated singularities gauge theory on resolutions of simple singularities and residues of foliations The articles give accounts of research in these fast developing areas Much of the material appears here for the first time in print Titles in this series are co published with International Press Cambridge MA USA Several Complex Variables and Complex Geometry, Part II Eric Bedford, 1991 **Algebraic Geometry over the Complex Numbers** Donu Arapura, 2012-02-15 This is a relatively fast paced graduate level introduction to complex algebraic geometry from the basics to the frontier of the subject It covers sheaf theory cohomology some Hodge theory as well as some of the more algebraic aspects of algebraic geometry The author frequently refers the reader if the treatment of a certain topic is readily available elsewhere but goes into considerable detail on topics for which his treatment puts a twist or a more transparent viewpoint His cases of exploration and are chosen very carefully and deliberately The textbook achieves its purpose of taking new students of complex algebraic geometry through this a deep yet broad introduction to a vast subject eventually bringing them to the forefront of the topic via a non intimidating style Complex Geometry and Lie Theory James A. Carlson, Charles Herbert Clemens, David R. Morrison, 1991 In the late 1960s and early 1970s Phillip Griffiths and his collaborators undertook a study of period mappings and variation of Hodge structure The motivating problems which centered on the understanding of algebraic varieties and the algebraic cycles on them came from algebraic geometry However the techniques used were transcendental in nature drawing heavily on both Lie theory and hermitian differential geometry Promising approaches were formulated to fundamental questions in the theory of algebraic curves moduli theory and the deep interaction between Hodge theory and algebraic cycles Rapid progress on many fronts was made in the 1970s and 1980s including the discovery of important connections to other fields including Nevanlinna theory integrable systems rational homotopy theory harmonic mappings intersection cohomology and superstring theory This volume contains thirteen papers presented during the Symposium on Complex Geometry and Lie Theory held in Sundance Utah in May 1989 The symposium was designed to review twenty years of interaction between these two fields concentrating on their links with Hodge theory The organizers felt that the time was right to examine once again the large issues of understanding the moduli

and cycle theory of higher dimensional varieties which was the starting point of these developments The breadth of this collection of papers indicates the continuing growth and vitality of this area of research Several survey papers are included which should make the book a valuable resource for graduate students and other researchers who wish to learn about the field With contributions from some of the field's top researchers this volume testifies to the breadth and vitality of this area of research

**Differential and Complex Geometry: Origins, Abstractions and Embeddings** Raymond O. Wells, Jr., 2017-08-01 Differential and complex geometry are two central areas of mathematics with a long and intertwined history This book the first to provide a unified historical perspective of both subjects explores their origins and developments from the sixteenth to the twentieth century Providing a detailed examination of the seminal contributions to differential and complex geometry up to the twentieth century embedding theorems this monograph includes valuable excerpts from the original documents including works of Descartes Fermat Newton Euler Huygens Gauss Riemann Abel and Nash Suitable for beginning graduate students interested in differential algebraic or complex geometry this book will also appeal to more experienced readers

**The Geometry of Complex Domains** Robert E. Greene, Kang-Tae Kim, Steven G. Krantz, 2011-05-18 This work examines a rich tapestry of themes and concepts and provides a comprehensive treatment of an important area of mathematics while simultaneously covering a broader area of the geometry of domains in complex space At once authoritative and accessible this text touches upon many important parts of modern mathematics complex geometry equivalent embeddings Bergman and Kahler geometry curvatures differential invariants boundary asymptotics of geometries group actions and moduli spaces The Geometry of Complex Domains can serve as a coming of age book for a graduate student who has completed at least one semester or more of complex analysis and will be most welcomed by analysts and geometers engaged in current research

*Global Aspects of Complex Geometry* Fabrizio Catanese, Hélène Esnault, Alan Huckleberry, Klaus Hulek, Thomas Peternell, 2006-09-29 This collection of surveys present an overview of recent developments in Complex Geometry Topics range from curve and surface theory through special varieties in higher dimensions moduli theory Kahler geometry and group actions to Hodge theory and characteristic p geometry Written by established experts this book will be a must for mathematicians working in Complex Geometry

[Gauge Field Theory and Complex Geometry](#) Yuri I. Manin, 2013-03-09 From the reviews focused mainly on complex differential geometry and holomorphic bundle theory This is a powerful book written by a very distinguished contributor to the field Contemporary Physics the book provides a large amount of background for current research across a spectrum of field requires effort to read but it is worthwhile and rewarding New Zealand Math Soc Newsletter The contents are highly technical and the pace of

the exposition is quite fast Manin is an outstanding mathematician and writer as well perfectly at ease in the most abstract and complex situation With such a guide the reader will be generously rewarded Physicalia This new edition includes an Appendix on developments of the last 10 years by S Merkulov

*Hodge Theory, Complex Geometry, and Representation Theory* Mark Green, Phillip Griffiths, Matt Kerr, 2013-11-05 This monograph presents topics in Hodge theory and representation theory two of the most active and important areas in contemporary mathematics The underlying theme is the use of complex geometry to understand the two subjects and their relationships to one another an approach that is complementary to what is in the literature Finite dimensional representation theory and complex geometry enter via the concept of Hodge representations and Hodge domains Infinite dimensional representation theory specifically the discrete series and their limits enters through the realization of these representations through complex geometry as pioneered by Schmid and in the subsequent description of automorphic cohomology For the latter topic of particular importance is the recent work of Carayol that potentially introduces a new perspective in arithmetic automorphic representation theory The present work gives a treatment of Carayol's work and some extensions of it set in a general complex geometric framework Additional subjects include a description of the relationship between limiting mixed Hodge structures and the boundary orbit structure of Hodge domains a general treatment of the correspondence spaces that are used to construct Penrose transforms and selected other topics from the recent literature A co publication of the AMS and CBMS
