Literature Connections to World History 712 Lynda G. Adamson, 1998-06-15 Identifying thousands of historical fiction novels, biographies, history trade books, CD-ROMs and videotapes, these books help you locate resources on world history for students. Each is divided into two sections. In the first part, titles are listed according to grade levels within specific geographic areas and time periods. They are further organized by product type. Both books cover world history from Prehistory and the Ancient World to 54 B.C. to the modern era. Other chapters include Roman Empire to A.D. 476, Europe and the British Isles, Africa and South Africa, Australia, New Zealand, Pacific Islands and Antarctica, Canada, China, India, Tibet and Burma, Israel and Arab Countries, Japan, Vietnam, Korea, Cambodia and Thailand, and South and Central America and the Caribbean. The second section has an annotated bibliography that describes each title and includes publication information and awards. The focus is on books published since 1990 and all have received at least one award.

Talking Data Jane A. Edwards, Martin D. Lampert, 2014-02-25 This book presents the reader with a set of diverse, carefully developed and clearly specified systems of transcription and coding arising from contrasting theoretical perspectives and presented as alternative choices situated within the theoretical domain most natural to each. The perspectives represented include first and second language acquisition, interethnic and crosscultural interaction, information structure and the study of discourse influences on linguistic expression. In the contributed chapters, the designers of these systems provide a distillation of collective experiences from the past quarter century, telling in their own words their perspectives on language processes, how these perspectives have shaped their choice of methodology in transcription and coding of natural language, and describing their systems in detail. Overview chapters by the editors then provide design principles and guidelines concerning issues pertinent to all systems, including such things as reliability, validity, ease of learning, computational tractability, and robustness against error. The final chapter is a compendium of existing computerized archives of language data and information sources, together with details concerning data access and use.
