**Taxonomy of Australian Mammals** Stephen Matthew Jackson, Stephen Jackson, Colin Groves, 2015-06-16 Taxonomy of Australian Mammals utilises the latest morphometric and genetic research to develop the most up to date and comprehensive revision of the taxonomy of Australian mammals undertaken to date It proposes significant changes to the higher ranks of a number of groups and recognises several genera and species that have only very recently been identified as distinct This easy to use reference also includes a complete listing of all species subspecies and synonyms for all of Australia s mammals both native and introduced as well as terrestrial and marine This book lays a foundation for future taxonomic work and identifies areas where taxonomic studies should be targeted not only at the species and subspecies level but also broader phylogenetic relationships This work will be an essential reference for students scientists wildlife managers and those interested in the science of taxonomy

The Action Plan for Australian Mammals 2012 Andrew Burbidge, John Woinarski, Peter Harrison, 2014-06-02 The Action Plan for Australian Mammals 2012 is the first review to assess the conservation status of all Australian mammals It complements The Action Plan for Australian Birds 2010 Garnett et al 2011 CSIRO Publishing and although the number of Australian mammal taxa is marginally fewer than for birds the proportion of endemic extinct and threatened mammal taxa is far greater These authoritative reviews represent an important foundation for understanding the current status fate and future of the nature of Australia This book considers all species and subspecies of Australian mammals including those of external territories and territorial seas For all the mammal taxa about 300 species and subspecies considered Extinct Threatened Near Threatened or Data Deficient the size and trend of their population is presented along with information on geographic range and trend and relevant biological and ecological data The book also presents the current conservation status of each taxon under Australian legislation what additional information is needed for managers and the required management actions Recovery plans where they exist are evaluated The voluntary participation of more than 200 mammal experts has ensured that the conservation status and information are as accurate as possible and allowed considerable unpublished data to be included All accounts include maps based on the latest data from Australian state and territory agencies from published scientific literature and other sources The Action Plan concludes that 29 Australian mammal species have become extinct and 63 species are threatened and require urgent conservation action However it also shows that where guided by sound knowledge management capability and resourcing and longer term commitment there have been some notable conservation success stories and the conservation status of some species has greatly improved over the past few decades The Action Plan for Australian Mammals 2012 makes a major contribution to the conservation of a wonderful legacy that is a significant part of Australia s heritage For such a legacy to endure our society must be more aware of and empathetic with our distinctively Australian environment and particularly its marvellous mammal fauna relevant information must be readily accessible environmental policy and law must be based on sound evidence those

with responsibility for environmental management must be aware of what priority actions they should take the urgency for action and consequences of inaction must be clear and the opportunity for hope and success must be recognised It is in this spirit that this account is offered **Australian Mammal Society** ,1985 **Australian Mammal Society** ,1994-06

Complete Book of Australian Mammals Ronald Strahan,1984 This book covers all species of mammals native and introduced exclusive of whales known to have existed in Australia since the arrival of Europeans *The Handbook of New Zealand Mammals* Carolyn King,David Forsyth,2021-01-20 The Handbook of New Zealand Mammals is the only definitive reference on all the land breeding mammals recorded in the New Zealand region including the New Zealand sector of Antarctica It lists 65 species including native and exotic wild and feral living and extinct residents vagrants and failed introductions It describes their history biology and ecology and brings together comprehensive and detailed information gathered from widely scattered or previously unpublished sources The description of each species is arranged under standardised headings for easy reference Because the only native land breeding mammals in New Zealand are bats and seals the great majority of the modern mammal fauna comprises introduced species whose arrival has had profound effects both for themselves and for the native fauna and flora The book details changes in numbers and distribution for the native species and for the arrivals it summarises changes in habitat diet numbers and size in comparison with their ancestral stocks and some of the problems they present to resource managers For this third edition the text and references have been completely updated and reorganised into Family chapters The colour section includes 14 pages of artwork showing all the species described and their main variations plus two pages of maps Australian Mammals Stephen M. Jackson,2003 Provides practical guidance in the husbandry of Australian marsupials and other mammals It dedicates a chapter to each group of animals and gives details on its biology housing capture and restraint transport diet breeding artificial rearing behaviour and behavioural enrichment **Dictionary of Australian and New Guinean Mammals** Ronald Strahan,Pamela Conder,2007-10-04 Dictionary of Australian and New Guinean Mammals is the first unified guide to the mammals of both Australia and New Guinea Based on Ronald Strahan s first dictionary of Australian mammals published in 1981 it includes all species both native and introduced For each species and genus it provides a clear guide to pronunciation the derivation and significance of the component parts of the name and the citation that identifies its earliest valid description This unique work includes biographical notes on fifty one zoologists who over the past three centuries have named Australian and New Guinean mammals The book also includes an account of the principles and practices of zoological nomenclature together with a comprehensive bibliography and an index of common names Dictionary of Australian and New Guinean Mammals is an invaluable reference for mammal researchers and students as well as anyone interested in natural history Australian Mammals Jack Hyett,1980 Classification of animals Habitats Bandicoot Bat Camel Cat Deer Dog Dingo Dolphin Donkey Echidna Flying fox Hopping mouse Jerboa Kangaroo Koala Marsupial mouse Pademelon Platypus Possum Rat kangaroo Seal
