## **Completeness Of Root Functions Of Regular Differential Operators:**

**Completeness of Root Functions of Regular Differential Operators** Sasun Yakubov, 2021-12-24 The precise mathematical investigation of various natural phenomena is an old and difficult problem This book is the first to deal systematically with the general non selfadjoint problems in mechanics and physics It deals mainly with bounded domains with smooth boundaries but also considers elliptic boundary value problems in tube domains i e in non smooth domains This volume will be of particular value to those working in differential equations functional analysis and equations of mathematical physics

**Differential-Operator Equations** Yakov Yakubov, Sasun Yakubov, 1999-11-24 The theory of differential operator equations is one of two modern theories for the study of both ordinary and partial differential equations with numerous applications in mechanics and theoretical physics Although a number of published works address differential operator equations of the first and second orders to date none offer a treatment of the higher orders In *Differential Operator Equations* the authors present a systematic treatment of the theory of differential operator equations of higher order with applications to partial differential equations They construct a theory that allows application to both regular and irregular differential problems In particular they study problems that cannot be solved by various known methods and irregular problems not addressed in existing monographs These include Birkhoff irregularity non local boundary value conditions and non smoothness of the boundary of the domains Among this volume s other points of interest are The Abel basis property of a system of root functions Irregular boundary value problems The theory of hyperbolic equations in Gevrey space The theory of boundary value problems for elliptic differential equations with a parameter

**Analysis and Mathematical Physics** Tuncay Aktosun, Sergei Avdonin, Ricardo Weder, 2026-03-02 The book will contain refereed articles by the invited speakers on the 2024 AMP conference to be held during August 5 17 2024 online AMP stands for Analysis and Mathematical Physics It brings leading experts in their fields delivering 1 hour lectures in their field of expertise There are 28 invited speakers and there will also be many participants attending the online conference without presenting talks The conference will concentrate on the following topics Inverse problems for nonlocal operators Orthogonal polynomials Jacobi and CMV matrices Quantum graphs Applications of spectral and scattering theory to quantum mechanics and plasma physics Differential operators on closed sets Differential operators on spatial networks Direct and inverse spectral and scattering theory for differential and difference equations and for systems of such equations The aim of the conference is to bring together leading experts and young researchers from all over the world who work in the area of mathematical physics It promotes exchange of ideas and develops future scientific collaborations and strengthens existing collaborations The online conference will be broadcast live on a zoom webinar broadcast on Facebook and Youtube channels of IIMAS of UNAM The list of the speakers and the details for the conference can be found at the conference webpage <https://www.iimas.unam.mx/amp2024>

**Introduction to the Spectral Theory of Polynomial Operator Pencils** A. S. Markus, 2012-09-14 This

monograph contains an exposition of the foundations of the spectral theory of polynomial operator pencils acting in a Hilbert space. Spectral problems for polynomial pencils have attracted a steady interest in the last 35 years mainly because they arise naturally in such diverse areas of mathematical physics as differential equations and boundary value problems, controllable systems, the theory of oscillations and waves, elasticity theory and hydromechanics. In this book the author devotes most of his attention to the fundamental results of Keldysh on multiple completeness of the eigenvectors and associate vectors of a pencil and on the asymptotic behavior of its eigenvalues and generalizations of these results. The author also presents various theorems on spectral factorization of pencils which grew out of known results of M. G. Krein and Heinz Langer. A large portion of the book involves the theory of selfadjoint pencils, an area having numerous applications. Intended for mathematicians, researchers in mechanics and theoretical physicists interested in spectral theory and its applications, the book assumes a familiarity with the fundamentals of spectral theory of operators acting in a Hilbert space.

A. Il'in, 1995-08-31. In this fully illustrated textbook the author examines the spectral theory of self adjoint elliptic operators. Chapters focus on the problems of convergence and summability of spectral decompositions about the fundamental functions of elliptic operators of the second order. The author's work offers a novel method for estimation of the remainder term of a spectral function and its Riesz means without recourse to the traditional Carleman technique and Tauberian theorem apparatus.    **Functional Differential Equations**, 2002    *Journal of analysis and its applications*, 1982    **Revue Roumaine de Mathématiques Pures Et Appliquées**, 1995    **Doklady**, 2008    *Applied Science & Technology Index*, 1996    **Mathematica Balkanica**, 1998    **The British National Bibliography** Arthur James Wells, 1994
