

WHAT IS A TOURING BIKE?

Bicycles are built and used for many different purposes, including road, mountain, cyclocross and city riding. For each intended discipline, these bikes are optimized through design to offer different frame measurements, frame angles, type of parts and rider positioning.

Touring bikes are designed to comfortably carry you and your luggage on bike trips. They are smooth, strong, stable, upright and stiff enough to handle very heavy panniers. Touring bikes have adequate mounting points for racks, fenders and water bottles, and are designed so that you can carry heavy loads without the weight affecting the handling too much.

Touring bikes are not built equally. They can be optimized further to suit different types of bike travel, including smooth roads, off-road conditions and round-the-world trips. We will take a closer look at the different types of touring bike in 1.02.

SUMMARY

- Touring bikes are optimized specifically around bike travel carrying gear
- Touring bikes can be categorized further into more specific uses
