## **Architects And Firms A Sociological Perspective On Architectural Practices:**

**Architects and Firms** Judith R. Blau, 1987 This book vividly depicts the contradictions and dilemmas inherent in architectural practice and corrects many assumptions about design professionals Architect and Firms Judith R. Blau, 1988

**Ethics and the Practice of Architecture** Barry Wasserman, Patrick J. Sullivan, Gregory Palermo, 2000-03-07 From theory to practice a unique well rounded guide to ethics for today's architect How does an architect assist a community in evaluating alternative designs Resolve a dispute with a contractor Take into account a project's impact on the natural environment When it comes to questions like these making decisions about what ought to be done or what is the best or right solution requires more than sound technical knowledge and strong design talent It demands a solid understanding of the ethical issues that lie at the heart of architectural practice Ethics and the Practice of Architecture offers a complete broad based introduction to this crucial subject First it examines basic ethical theories and their application to architecture and discusses different ways of identifying ethical content in architecture Bridging the gap between theory and practice the second part of the book surveys different professional settings and building project processes that frequently hold ethical concerns and charts the ethical mandates that arise from them In the final section of the book thirty case studies explore a wide range of ethical dilemmas encountered in architectural practice with useful guidance on how to work through them effectively Arranged by topics that span the key phases of a project from pre design through post occupancy evaluation these case studies allow a detailed look at ethical concerns in real life situations where multiple issues are often at stake Providing a practical framework for the exploration of ethical issues in architecture today Ethics and the Practice of Architecture is an excellent resource for present and future architects in all areas of the field *Managing the Professional Practice* Hedley Smyth, 2011-02-25 The emphasis here is to explore the key issues influencing the culture strategies and management operations of professional practices The focus is upon established practices from growing ones to large international firms in the built environment A key aim of the book is to promote aspects of management by function and activities with discipline acting as context rather than the primary focus The book is structured into sections around 3 main themes managing the organisation and managing specific issues that affect operations and a third section reflects upon management from practitioner experience Section I Managing the organisation looks at how the history of the firm creates both opportunities and rigidities for developing the practice in terms of culture and market position strategies and implementation financial marketing and HR management Section II Managing specific strategic and tactical issues looks at how these affect approaches a discipline and operational processes in practices These issues compliment those covered in Section I Section III Reflecting on practice covers experience of those in practice and top practitioners detail how they are addressing key issues in their practice and for their discipline Each chapter by a practitioner has a postscript from academic authors to make links back to research on theory and application Addresses the key issues facing practice managers Collects

latest research from leading academics Offers comment on current practice from top practitioners **Metaphorical Practices in Architecture** Sarah Borree, Stephanie Knuth, Moritz Röger, 2023-06-23 Metaphors are diversely and intricately embedded in architectural practice and discourse Precisely for this reason this volume argues and sets out to explore how they can be engaged to critically interrogate architecture's social cultural and political dimensions past and present and to productively challenge and intervene with established perspectives debates and practices Mapping out not just potentials but also addressing the challenges limitations and dangers inherent in using metaphors in architectural research and practice the volume prominently illustrates the ambiguity and contradictoriness inherent in both metaphors and the process of engaging and exploiting them Covering a broad range of historical and geographical cases and concerns the contributions illustrate effectively that metaphors can expand or narrow our engagement with architecture and consolidate or legitimise but also destabilise and challenge established social cultural disciplinary and political structures concepts and categories With its aim to explore metaphors as both subject and method to critically challenge and expand established practices perspectives and standards in architectural research and practice the volume will be of interest for scholars working across the architectural humanities including architectural history theory culture design and urbanism as well as for researchers concerned with architecture and the city from fields such as cultural visual and area studies as well as art history

Encyclopedia of Urban Studies Ray Hutchison, 2010 An encyclopedia about various topics relating to urban studies

**Incorporating Architects** Aaron Cayer, 2025-06-03 By the end of the twentieth century US architecture and engineering firms held more capital than entire countries employed more people than were housed in most cities and rented offices in more nations than comprised the UN Within them architects were designing not single buildings but urban systems including the multinational infrastructures legal codes and financial mechanisms on which those systems came to depend However despite the extraordinary power of these architects their histories remain shrouded in myth and concealed by design This forensic analysis traces a history of architects at one such firm AECOM as they assembled their own multinational corporation and embedded themselves in the operations of American empire after World War II shielding themselves from the instabilities of a postwar political economy **Incorporating Architects** reveals how architects through their businesses more than their drawings or buildings modulated the political economy gripped the reins of their profession and produced the global injustices that define our neoliberal present **Architecture and Labor** Peggy Deamer, 2020-04-07 Through a collection of 13 chapters Peggy Deamer examines the profession of architecture not as an abstraction but as an assemblage of architectural workers What forces prevent architects from empowering ourselves to be more relevant and better rewarded How can these forces be set aside by new narratives new organizations and new methods of production How can we sit at the decision making table to combat short term real estate interests for longer term social and ethical value How can we pull architecture its conceptualization its pedagogy and its enactment into the 21st century without succumbing to its neoliberal

paradigm In addressing these controversial questions Architecture and Labor brings contemporary discourses on creative labor to architecture a discipline devoid of labor consciousness This book addresses how not just what architects produce and focuses not on the past but on the present It is sympathetic to the particularly intimate way that architects approach their design work while contextualizing that work historically institutionally economically and ideologically Architecture and Labor is sure to be a compelling read for pre professional students academics and practitioners

**Architects and Their Practices** Martin Symes, Joanna Eley, Andrew D. Seidel, 1995 Presents the results of a study of the changes which have occurred in architectural practice over the last 20 years and addresses key aspects of the profession's response to change The book includes changes in the building industry and changes in the role of architects
