*Sacred Power, Sacred Space* Jeanne Halgren Kilde, 2008-07-21 Jeanne Halgren Kilde's survey of church architecture is unlike any other Her main concern is not the buildings themselves but rather the dynamic character of Christianity and how church buildings shape and influence the religion Kilde argues that a primary function of church buildings is to represent and reify three different types of power divine power or ideas about God personal empowerment as manifested in the individual's perceived relationship to the divine and social power meaning the relationships between groups such as clergy and laity Each type intersects with notions of Christian creed cult and code and is represented spatially and materially in church buildings Kilde explores these categories chronologically from the early church to the twentieth century She considers the form organization and use of worship rooms the location of churches and the interaction between churches and the wider culture Church buildings have been integral to Christianity and Kilde's important study sheds new light on the way they impact all aspects of the religion Neither mere witnesses to transformations of religious thought or nor simple backgrounds for religious practice church buildings are in Kilde's view dynamic participants in religious change and goldmines of information on Christianity itself

Prayers in Stone Paul Eli Ivey, 1999 The classical revival style of architecture made famous by the 1893 World's Columbian Exposition in Chicago left its mark on one of the most sustained classical building movements in American architectural history the Christian Science church building movement By 1920 every major American city and many smaller towns contained an example of this architecture financed by the followers of Mary Baker Eddy the church's founder These buildings represented a new burgeoning American institution that appealed to business people and to young men and women working to succeed Characterized by middle class congregations that in the early part of the century were over 75 percent women Christian Science suggested radical civic reform solutions based on an idealistic and pragmatic individualism It attracted criticism from traditional churches and from the medical establishment due to its rapid growth and

to its reinstatement of primitive Christianity's lost elements of physical healing and moral regeneration. Prayers in Stone spins out the close connections between Christian Science church architecture and its social context. This architecture served as a focal point for debates over the possibilities for a new twentieth-century urban architecture that proponents believed would positively shape the behavior of citizens. Thus, these buildings played a critical role in discussions concerning religious and secular architecture as major elements of religious and social reform. Drawing on a wide range of documentary evidence, including material from the archives of the Mother Church in Boston, Paul Ivey uses Christian Science architecture to explore the social implications of architectural styles and new building technologies to illuminate class-based notions of civic reform and beautification and to investigate the use of architecture to bring about religious and social change. In addition, the book explores complex gender issues, including early attempts to define a professional space for women as Christian Science practitioners. Lavishly illustrated, Prayers in Stone focuses on four major city arenas of Christian Science building: Boston, Chicago, New York, and the San Francisco Bay area, to demonstrate the vital intersection of architecture and religion at the so-called margins of American society.

**Contemporary Church Architecture**, Edwin Heathcote, Laura Moffatt, 2007-06-05. The last decade has seen the emergence of a whole new generation of church designs. Covering buildings across the world, Contemporary Church Architecture aims to appeal not only to architects and clergy involved directly in ecclesiastical architecture but also other practitioners and those with a broader interest in cutting-edge design. This book covers the development of contemporary church design by looking at how the rational and the sacred can be reconciled and can inform one another. It also outlines the main trends and approaches, the conflict between self-expression and expression of the sacred, between sculptural signification and functionalism. Beautifully illustrated with around 350 photographs.      **Building Type Basics for Places of Worship**, Nicholas W. Roberts, 2004-07-12. Publisher Description.      [Architect](#), 1872
