**Architecture for an Embryologic Housing** Greg Lynn, Analogical Thinking in Architecture Jean-Pierre Chupin, 2023-07-27 This book provides an in depth exploration of the rich and persistent use of analogical thinking in the built environment Since the turn of the 21st century design thinking has permeated many fields outside of the design disciplines It is expected to succeed whenever disciplinary boundaries need to be transcended in order to think outside the box This book argues that these qualities have long been supported by analogical thinking an agile way of reasoning in which think the unknown through the familiar The book is organized into four case studies the first reviews analogical models that have been at the heart of design thinking representations from the 1960s to the present day the second investigates the staying power of biological analogies the third explores the paradoxical imaginary of analogous cities as a means of integrating contemporary architecture with heritage contexts while the fourth unpacks the critical and theoretical potential of linguistic metaphors and visual comparisons in architectural discourse Comparing views on the role of analogies and metaphors by prominent voices in architecture and related disciplines from the 17th century to the present the book shows how the analogical world of the project is revealed as a wide open field of creative and cognitive interactions These visual and textual operations are explained through 36 analogical plates which can be read as an inter text demonstrating how analogy has the power to reconcile design and theories *Architecture After Deleuze and Guattari* Chris L. Smith, 2023-05-04 This study illuminates the complex interplay between Deleuze and Guattari s philosophy and architecture Presenting their wide ranging impact on late 20th and 21st century architecture each chapter focuses on a core Deleuzian Guattarian philosophical concept and one key work of architecture which evokes contorts or extends it Challenging the idea that a concept or theory defines and then produces the physical work and not vice versa Chris L Smith positions the relationship between Deleuze and Guattari s philosophy and the field of architecture as one that is mutually substantiating and constitutive In this framework modes of architectural production and experimentation become inextricable from the conceptual territories defined by these two key thinkers producing a rigorous discussion of theoretical practical and experimental engagements with their ideas *Soft Living Architecture* Rachel Armstrong, 2018-09-06 *Soft Living Architecture* explores the invention of new architectures based on living processes It crafts a unique intersection between two fast developing disciplines biomimicry and biodesign in architecture and bioinformatics and natural computing in the natural sciences This is the first book to examine both the theory and methodology of architecture and design working directly with the natural world It explores a range of approaches from the use of life like systems in building design to the employment of actual growing and living cell and tissue cultures as architectural materials creating architecture that can change learn and grow with us The use of living architecture is cutting edge and speculative yet it is also inspiring a growing number of designers worldwide to adopt alternative perspectives on sustainability and environmental design The book

examines the ethical and theoretical issues arising alongside case studies of experimental practice to explore what we mean by natural in the Anthropocene and raise deep questions about the nature of design and the design of nature This provocative and at times controversial book shows why it will become ever more necessary to embrace living processes in architecture if we are to thrive in a sustainable future **Architecture**, 2003 **Outlines of Human Embryology** George Reese Satterlee, 1914 **Smart Spaces** Zhihan Lyu, 2024-03-18 Smart Spaces combines the study of working or living spaces with computing information equipment and multimodal sensing devices and with natural and convenient interactive interfaces to support how people can easily obtain services from computer systems People s work and life in smart spaces use computer systems it is a process of uninterrupted interaction between people and the computer system In this process the computer is no longer just an information processing tool that passively executes explicit human operation commands but a collaborator with people to complete tasks a partner to human beings International research on smart spaces is quite extensive which shows the important role of smart spaces in ubiquitous computing research Smart Spaces covers the latest research concepts and technologies of smart spaces providing technical personnel engaged in smart space related research and industries a more in depth understanding of smart spaces This book can be used as a reference for practicing the emerging discipline of Smart Spaces and will be useful for researchers scientists developers practitioners and graduate students working in the fields of smart spaces and artificial intelligence Comprehensively introduces smart spaces from basic concepts core technologies technical architecture application scenarios and other aspects Covers the latest cutting edge application technology of smart spaces in various fields providing relevant practitioners with ideas to solve problems and have a deeper understanding of smart spaces Serves as teaching material or as a reference for teachers and students of interaction design internet of things ubiquitous and pervasive computing and artificial intelligence Gives a detailed introduction to the theory of Smart Spaces and uses mathematical formulas **Artbyte**, 2000 The magazine of digital arts **Contemporary Processes in Architecture** Ali Rahim, 2000-11 Yesterday s working methods are no longer adequate for architectural practice The neo avant garde architects are now arguing for contemporary processes that are as dynamic and fluid as the way we live and think with the same intensity as such intangible forces as the global market and the Internet For any process to be truly creative in the generative sense we must condition an environment where new rules engage and inspire us Models of design need to be created that are capable of consistently transforming and evolving keeping pace with today s rate of change This issue of Architectural Design explores how contemporary processes in the pursuit of creativity and fluidity have become more abstract and experimental attempting to overcome the pragmatic determinism attributed to more conventional working methods It explores the work of architects who design with generative potentials force fields and conceptual diagrams developed with the aid of high end computer software packages Through elucidating texts and the potent imagery of process many of the projects are illustrated stage by stage it effectively promises that a revolution is about to happen in

**New Directions in Contemporary Architecture** Luigi Prestinenza Puglisi, 2008-05-05 Rem Koolhaas has defined architecture as a chaotic adventure Nothing could be more true than that of the last two decades Never has architecture been so unbridled and so extraordinary the architectural cast has never been so wide and their works so diverse What though if you are new to the subject How is it possible to make sense of this seemingly unruly architectural landscape There are so many different types of architecture so many designers with such varying and even contradictory approaches This book is a much needed navigation guide for anyone interested in modern architecture Organised chronologically it enables you to find your way through one of the most prolific periods of building design It looks at buildings in often contrasting styles that have been built almost simultaneously across the world with their roots in very different tendencies and schools of thought A loose but effective framework is provided which pulls all these multiple threads together while key buildings are described individually with a unique clarity and precision Aaron Betsky Director of Cincinnati Art Museum Comprehensive coherent and cogent Puglisi's book sorts out the messy history of the last quarter century of the world's best architecture Professor Iain Borden Head Bartlett School of Architecture UCL Illuminating and insightful a must have read for students Hans Ibelings Editor of *A10 new European architecture* Lucid and concise Charles Jencks Architecture Critic and Author A compelling comprehensive overview of the avant garde since 1988 as it oscillates in and out of the global star system Bill Menking Editor of *The Architect's Newspaper* This is the first clear and systematic study of the culture of architecture from the reds of deconstruction to the sustainable greens
