*Climate Change Impacts on Arctic Ecosystems and Associated Climate Feedbacks* Torben Røjle Christensen, Per Fauchald, Marie Frost Arndal, 2026-02-25 The Arctic Council Working Groups AMAP Arctic Monitoring and Assessment Program and CAFF Conservation of Arctic Flora and Fauna have taken the initiative to jointly review and assess climate impacts on Arctic marine coastal freshwater and terrestrial ecosystems and ecosystem feedbacks to climate As a component of this work a series of review papers on the state of the art within a range of different research themes under a unifying topic is proposed for this Research Topic The overarching theme will synthesize existing literature on linkages between biodiversity issues and climate feedbacks in arctic marine including coastal terrestrial and freshwater ecosystems and emphasize the interface between these ecosystems This Research Topic aims at exploring the science of how biodiversity and ecosystems in the Arctic interact with physical climate feedback mechanisms and vice versa It is focusing on the biotic and physical aspects of such interactions The goal is hence to form a bridge between biodiversity concerns and issues relating to ecosystem atmosphere interactions The target audience is the scientific community researchers practitioners and managers in the fields of biodiversity ecology climate and interdisciplinary fields focusing on the Arctic Additional audiences include policy advisers and other staff in environmental related ministries The themes below are for suggested experts and focal points to help define and lead specific articles under each theme

- 1 Key interactions between Arctic ecosystems climate change biodiversity and feedbacks general studies Interactions between Arctic ecosystems climate change biodiversity and feedbacks an introduction Changes in primary producer including biodiversity composition and its impact on climate feedbacks marine coastal terrestrial freshwater Ecosystem consequences of climate induced changes in the migration and phenology of Arctic animals
- 2 Catchment scale studies of whole ecosystem dynamics and their interactions with climate Case studies from around the Arctic with long time series on multiple biodiversity parameters ecosystems terrestrial freshwater coast and relevant climate parameters The net ecosystem carbon balance NECB of comparable catchments along a gradient from the high arctic to the northern boreal zone
- 3 Trophic interactions and future climate feedbacks from the Arctic terrestrial and marine Trophic cascades and future climate feedbacks from the terrestrial Arctic Benthic pelagic coupling in Arctic marine ecosystems Baleen whales zooplankton phytoplankton dynamics
- 4 Ecosystem disturbance permafrost thaw extreme climatic events and their impacts on terrestrial freshwater and marine arctic biodiversity as well as climate Extreme climatic events and their impact on Arctic marine ecosystems Permafrost thaw impacts on ecosystem structure and function including contributions to GHG emissions Permafrost thaw as it affects microbial dynamics and trace gas exchanges Permafrost thaws and landscape greening effects on Arctic terrestrial and freshwater ecosystems Biological responses to ocean acidification and potentially related feedbacks Wildfires in the Arctic trends and consequences for biodiversity and greenhouse gas budgets
- 5 Modeling ecosystem structure and function as it impacts ecosystem climate interactions

Integrating Arctic biodiversity and ecosystem process models with climate models 6 Borealization of Arctic ecosystems How does climate change impact the Arctic seasonal habitats and the migration and phenology of marine freshwater and terrestrial animals The future of high Arctic coastal shelf ecosystems under climate change Borealization of marine Arctic ecosystems 7 An editorial that will serve as a basis for an executive summary for policymakers from AMAP and CAFF This will include conclusions with key findings and advice drawn from each of the article and concluding with reflections on policy implications and what we can expect in the future Please note that contributions to the collection are by invitation only for lead authors identified by AMAP and CAFF

At the present time most developed countries are massively wasteful throughout almost all sectors of the economy ranging from energy use to consumer lifestyles. One of the main obstacles to conservation and recycling of resources is the lack in most countries of national mindsets encouraging such practices as well as the infrastructures to support their carrying out.
