

● ● ● | Why external evidence?

- **Ohala 1986: “natural experiments”**
 - he rates “ludlings as #2, only to experiments”
 - Spawned from limited data set, thus not subject to the history/ convention critique levelled against phonological patterns in the regular language.
- **Can reveal hidden properties of lexical items and rules not visible in native phonological system:**
 - trumped/blocked by inherited patterns
 - sC- clusters in English vis a vis Pierrehumbert & Nair 1995
 - native lexicon doesn't provide right environments

Arguments From External Evidence In Phonology:

Arguments from External Evidence in Phonology Donald George Churma, 1900 *Arguments from External Evidence in Phonology* Donald George Churma, 1982 **The Theory of Lexical Phonology** K.P. Mohanan, 2012-12-06 This book contains some of the material which originally appeared in my Ph D thesis *Lexical Phonology* submitted at the Massachusetts Institute of Technology but it can hardly be called a revised version of the thesis The theory that I propose here is in many ways radically different from the one that I proposed in the thesis and there is a great deal of new data and analyses from English and Malayalam Chapter VI is so new that I haven't even had the time to try it out on my friends As everyone knows research is a collective enterprise even though an individual's name appears on the first page of the book or article I would think of this book as a joint project involving dozens of people in which I acted as the project coordinator collecting suggestions from a wide variety of sources Four major influences on what the book contains were Morris Halle Paul Kiparsky Mark Liberman and Joan Bresnan I learned the ropes of doing research on phonology phonetics and morphology from them and almost everything that I discuss in this book owes its shape ultimately to one of them Among the others who contributed generously to this book are Jay Keyser James Harris Douglas Pulleyblank Diana Archangeli Donca Steriade Elizabeth Selkirk Francois Dell Noam Chomsky Philip Lesourd Mohammed Guerssel Michel Kenstowicz Raj Singh Will Leben Joe Perkell Victor Zue Paroo Nihalani P Madhavan and Stephanie Shattuck Hafnagel **Explanation in Phonology** Paul Kiparsky, 2012-08-06 No detailed description available for *Explanation in Phonology* Topics in Phonological Theory Michael Kenstowicz, Charles Kisseberth, 2014-05-10 *Topics in Phonological Theory* is a six chapter text that provides an explication of some of the most important problems in phonological theory with a few necessarily tentative solutions The first chapter deals with the problem of abstractness in terms of a series of successively weaker constraints that might be placed on the relationship between the underlying and phonetic representations of a morpheme The second chapter begins with a discussion of the various ways in which the phonetic basis of a rule may be lost in the course of historical change which lays the groundwork for a lengthy survey of the types of grammatical and lexical conditions that may control the application of a phonological rule The third chapter describes the constraints and conditions on phonological representations particularly the domain of these constraints the level at which they hold and their duplication of phonological rules The fourth chapter examines the problem of natural rule interactions focusing on Kiparsky's theories of maximal utilization and opacity transparency and their deficiencies The fifth chapter deals with Chomsky and Halle's simultaneous application principle as well as with more recent proposals The sixth chapter compares the relative merits of global rules versus rule ordering for the description of opaque rule interactions This book is intended primarily for linguistics Lexical Phonology and the History of English April McMahon, 2000-04-13 This book has two main goals the re-establishment of a rule based phonology as a viable alternative to current non-derivational models and the rehabilitation of historical evidence as a focus of phonological theory Although *Lexical Phonology*

includes several constraints such as the Derived Environment Condition and Structure Preservation intended to reduce abstractness previous versions have not typically exploited these fully The model of Lexical Phonology presented here imposes the Derived Environment Condition strictly introduces a new constraint on the shape of underlying representations excludes underspecification and suggests an integration of Lexical Phonology with Articulatory Phonology
