Arithmetic Of Complex Manifolds Lecture Notes In Mathematics Volume 1399:

The Arithmetic and Geometry of Algebraic Cycles B. Brent Gordon, 2000-01-01 From the June 1998 Summer School come 20 contributions that explore algebraic cycles a subfield of algebraic geometry from a variety of perspectives The papers have been organized into sections on cohomological methods Chow groups and motives and arithmetic methods Some specific topics include logarithmic Hodge structures and classifying spaces Bloch's conjecture and the K theory of projective surfaces and torsion zero cycles and the Abel Jacobi map over the real numbers

Arithmetic and Geometry of K3 Surfaces and Calabi-Yau Threefolds Radu Laza, Matthias Schütt, Noriko Yui, 2013-06-12 In recent years research in K3 surfaces and Calabi Yau varieties has seen spectacular progress from both arithmetic and geometric points of view which in turn continues to have a huge influence and impact in theoretical physics in particular in string theory The workshop on Arithmetic and Geometry of K3 surfaces and Calabi Yau threefolds held at the Fields Institute August 16 25 2011 aimed to give a state of the art survey of these new developments This proceedings volume includes a representative sampling of the broad range of topics covered by the workshop While the subjects range from arithmetic geometry through algebraic geometry and differential geometry to mathematical physics the papers are naturally related by the common theme of Calabi Yau varieties With the big variety of branches of mathematics and mathematical physics touched upon this area reveals many deep connections between subjects previously considered unrelated Unlike most other conferences the 2011 Calabi Yau workshop started with 3 days of introductory lectures A selection of 4 of these lectures is included in this volume These lectures can be used as a starting point for the graduate students and other junior researchers or as a guide to the subject

Encyclopaedia of Mathematics Michiel Hazewinkel, 1993-01-31 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Surveys in Geometry and Number Theory Nicholas Young, 2007-01-18 A collection of survey articles by leading young researchers showcasing the vitality of Russian mathematics

A Survey of the Hodge Conjecture James Dominic Lewis, 1999 This book provides an introduction to a topic of central interest in transcendental algebraic geometry the Hodge conjecture Consisting of 15 lectures plus addenda and appendices the volume is based on a series of lectures delivered by Professor Lewis at the Centre de Recherches Mathematiques CRM The book is a self contained presentation completely devoted to the Hodge conjecture and related topics It includes many examples and most results are completely proven or sketched The motivation behind many of the results and background material is provided This comprehensive approach to the book gives it a user friendly style Readers need not search elsewhere for various results The book is suitable for use as a text for a topics course in algebraic geometry It includes an appendix by B Brent Gordon

Curves and Abelian Varieties Valery Alexeev, 2008 This book is devoted to recent progress in the study of curves and abelian varieties It discusses both classical aspects of this deep and beautiful subject as well as two important new developments tropical geometry and the theory of log schemes In addition to original research articles this book contains three surveys devoted to singularities of theta divisors of compactified Jacobians of singular curves and of strange duality among moduli spaces of vector bundles on algebraic varieties

BOOK JACKET **Research Directions in Number Theory** Alina Bucur, Wei Ho, Renate Scheidler, 2024-06-26 This is the fifth proceedings volume published under the Women in Numbers umbrella The WIN workshops and their proceedings volumes are part of the WIN network aimed at highlighting the research of women and gender minorities in number theory as well as increasing their participation and boosting their potential collaborations in number theory and related fields The volume contains research articles in the mathematical area of number theory written by teams of scholars at all levels in the field More information about the network its goals and purpose past and future conferences and past proceedings volumes can be found on the WIN website This volume contains research outcomes and results produced by the collaborative research groups created under the Women in Numbers V workshop the 5th in its series The actual workshop was to take place in 2020 at the Banff International Research Station in Banff Canada but could not take place onsite due to COVID The associated research groups each consisting of 1 2 leaders and 2 4 junior researchers were formed nevertheless and their collaborations went ahead in purely virtual form as well as other papers by author teams for which at least 50% of the authors identify as women or gender minorities These contributions include original research and survey articles in a wide variety of subareas within number theory The former present new cutting edge research that will be of interest to experts in the field to the benefit of their own research The survey articles serve as an accessible introduction for graduate students and other readers to areas of number theory that may be outside their area of expertise

Mathematics Studies Karl Rubin,1940 **Existence Families, Functional Calculi and Evolution Equations** Ralph
 DeLaubenfels,1994-03-28 This book presents an operator theoretic approach to ill posed evolution equations It presents the
 basic theory and the more surprising examples of generalizations of strongly continuous semigroups known as existent
 families and regularized semigroups These families of operators may be used either to produce all initial data for which a
 solution in the original space exists or to construct a maximal subspace on which the problem is well posed Regularized
 semigroups are also used to construct functional or operational calculi for unbounded operators The book takes an intuitive
 and constructive approach by emphasizing the interaction between functional calculus constructions and evolution equations
 One thinks of a semigroup generated by A as e^{tA} and thinks of a regularized semigroup generated by A as $e^{tA} g A$ producing
 solutions of the abstract Cauchy problem for initial data in the image of $g A$ Material that is scattered throughout numerous
 papers is brought together and presented in a fresh organized way together with a great deal of new material *Linear and*
