

The 5 Phases of Architectural Design

From Idea to Construction

Schematic Design

Initial sketches and spatial ideas to visualize the concept

Design Development

Refined layouts, materials, and systems for technical alignment

Construction Documents

Initial sketches and spatial ideas to visualize the concept

Bidding & Negotiation

Contractor pricing and selection based on final drawings

Construction Administration

Architect oversees construction to ensure design is followed

Architectural Management

Stephen Emmitt, Mohammed A. Alharbi

Architectural Management:

Architectural Management Stephen Emmitt, Matthijs Prins, Ad den Otter, 2009-04-13 Architectural Management represents the state of the art of research and practice in the field and includes contributions from leading international figures The book looks back at over a decade of research into architectural management considers the present challenges and opportunities and looks to the future You ll find a review of earlier work and developments as well as a focus on new research areas The book is divided into six sections representing topical themes each section contains two research based chapters and one practical case study Case studies are from six European countries Belgium Denmark Finland The Netherlands Norway and the UK

Architectural Management M.P. Nicholson, 2003-09-02 This book allows the construction professional to gain an insight into the fast moving subject of architectural management Subjects covered include organization of design and construction Computing and the architect quality and value engineering performance of buildings the public estate professional construction law and education and training

Architectural Management Albert Hyde, Frederik Uys, 2011 We can t see things as they happen we can only see the result That s all we have When we are successful all we have is action the means to achieve are obliterated they cease to be interesting Jean Nouvel French Architect The Singular Objects of Architecture 2002 Academics as well as frustrated public managers are continuously looking for new management models This paper is the result of an ongoing research collaboration between two Public Management critics and an Architect across three continents which has been examining the fields of architecture and design to determine whether new answers might be found by reformulating management questions in a different discipline In the past the logic and to a greater extent the language of architecture and design have often been used to assess the structure and internal mechanics of organisations This research attempts to go further and explore the potential for architectural and design thinking to contribute to different ways of thinking about public management There is already a re emerging interest within the fields of architecture in how design impacts organization and management In a symposium in the 2008 issue of MIT s Design Issues on Design Organizational Change managers are reminded that the ideal of having design as an explicit concept in management dates back to Herbert Simon s path breaking work on administrative decision making in 1945 The symposium notes that the core tenets of design science were formulated with decision making organizational communications and information theory in mind which served as an inspiration behind Simon s path breaking 1996 work on structural design and management practice in The Sciences of the Artificial In the same symposium the case is made that every manager should have a design attitude which is essential to ensuring organizational success is premised on the constant redesign of processes services and products The case is further made using the famous Architect Frank Gehry s practice as the model that architecture and design can help bring to management recognition of the importance of getting beyond functional Functionality of course is essential to good management but the hyper pursuit of excellence in different

parts of the organization often results in overspecialization loss of perspective on what the whole organization is about and disconnection with the public it was designed to serve Russell Ackoff one of the great management systems thinkers also advocated looking within architecture and design for better models for management He noted in a presentation in 2004 that the field starts with an advantage in perspective Architects build after they have a design of the whole and how that fits in the larger environment thereby avoiding reductionist and analytical thinking that tries to optimize performance by adding and improving the parts When an architect designs a house he she first sketches the house as a whole and then puts rooms into it The principle criterion employed in evaluating a room is what effect it has on the whole and good architects are even willing to make a room worse if doing so will make the house better This paper is an assessment of how Architectural Management might be applied to public management to understand or comprehend the phenomena of public management with both more precision and perspective and to contribute to new ways of thinking about professional practice and relationships within public management A secondary objective will be to look at the current paradigm of performance management within public organizations for different insights and implications For methodology the research for the paper is based on four streams of inquiry a literature review of Mgt Journals in the past decade juxtaposing Architecture and Design and Management Thinking and an assessment of some of the leading books in Architecture and design theory and discipline development a select historical overview of the development of architecture and design principles and its search for new systems or new states of existing systems a convenience sample of conversations and interviews with architects public managers and public administration students in California Greece and South Africa a select portfolio of building plans and photos and process product design examples to illustrate potential applications of architectural thinking to public management In terms of an outline the paper will begin with some current theories and practices of architecture and design to ascertain the potential value of integrating architectural thinking or what will be labelled architectural management into public administration and management It will include a brief survey of of the development of architectural management to provide some historical perspectives definitions and philosophies It will then examine applications how architectural management can influence and lead to improvement and innovation in public administration thinking and professional practice Subfields will also be explored to include bureaucratic politics and the larger environment of public affairs organizational theory and behaviour and public management leadership The conclusion makes the case for seeing architectural management as a promising alternative management model for public management and promoting the inclusion of design expertise as a critical competency for public managers As for influencing public management as a field of study architectural management s ongoing quest for seeking new forms of knowledge innovations in modelling and broadening perspective and new methods of practice should also serve as an inspiration

Architectural Management M. Paul Nicholson, 1992 This book allows the construction professional to gain an insight into the fast moving subject of

architectural management Subjects covered include organization of design and construction Computing and the architect quality and value engineering performance of buildings the public estate professional construction law and education and training
