## **Architecture Of The Indeterminacy:**

*Architecture of Indeterminacy* Yago Conde, 2000 We should then understand this indeterminacy as a certain state of suspension of the precise meaning of the object resulting from the re questioning of the limits in which this is inscribed The book proposes to investigate those episodes in which there exists a questioning of architectural limits a questioning of the construction and meaning of the architectural object This study does not set out to situate itself on an absolutely given terrain history criticism and theory professional praxis pedagogy or even performance but attempts instead to develop a discourse which is informed by the diversity of these normally restricted positions With essays by prominent architectural theorists this book is a valuable addition to both the academic and professional architecture communities *The Architecture of English Indeterminacy* Kenneth Jones, 1967 **Alt-Form** Viola Ago, 2022-04-04 In a world that is missing a central theoretical voice in architecture now more than ever it is time to solicit emergent voices on the topic of alternative formalisms Alt Form This issue of AD aims to reach peripheral disciplines in order to support an architecture that no longer operates as a standalone field of study and is rather one that responds to broader urgent and pluralistic cultural shifts In the existing contemporary landscape of visually oriented fields of study casual compositions and other formless expressions have begun to re emerge particularly in the disciplines of art architecture and popular image culture In architecture with the rise of the digital the last two decades have witnessed a field in pursuit of novel styles through the use of the latest digital tools More recently however over the last five years or so the field has experienced a more novelty apathetic attitude permeated with project proposals that resist the urge to offer immediate solutions in favour of enmeshment with a contemporary condition characterised by duress destruction uncertainty and other formless becomings This AD explores this new emerging world Contributors Suzanne Cotter Andrew Culp Jack Halberstam Jeff Halstead Carolyn Kane Ersela Kripa and Stephen Mueller Carl Lostritto Thom Mayne V Mitch McEwen and Kristina Kay Robinson Anna Neimark Jennifer Newsom and Tom Carruthers Dorina Pllumbi Faysal Tabbara and Dalena Tran Featured architects AGENCY Architecture and Other Things Atelier Office Dream the Combine First Office MIRACLES and Morphosis *Thinking Design* Randall Teal, 2018 The legacy of Platonic thought and education in the West has led to a narrowing of what we call thinking In particular this legacy has led to modes of thinking that overvalue linear logic objective facts and universal constants overlooking those human capacities whose results are difficult to measure because they cannot be quantified However architecture is a discipline that necessarily depends upon understanding those experiences that are temporal affective ephemeral relational embedded lived and felt Architectural thinking overcomes scientific rationalism only through the realization that architectural significance can be found also in the indeterminacy of poetic understanding which communicates via analogical language the language of temporal affectivity This study aims to better understand creative thinking both generally and in the context of architecture focusing on specific questions about the self imposed limits that are typically placed upon what we call thinking and how to

better stimulate the agilities of creative thought in architecture In order to be congruent with the critique of a pervasive mathematical syntax the methods and results of study strive to remain poetic in nature in other words this is a theoretical exercise whose insights are measured rhetorically through the correlation of various pieces of circumstantial evidence structured by an argument that succeeds or fails through its persuasive force alone This evidence is built from anecdotes examples and arguments and structured through conversations with the thinking of philosophy and architecture of particular importance in this study are philosophers Martin Heidegger Gilles Deleuze and Gilbert Simondon and the Finnish architect Reima Pietil This is an argument for designing more supple sensitive and resilient modalities of thinking thinking that is not solely aimed at creating better buildings but also at carving out new areas of influence for architectural thinking in society

Page 4 of cover Indeterminacy, the I Ching, and John Cage Barry R. Morse, 2025-12-02 The creative use of indeterminacy that is chance is an often overlooked design opportunity despite the universality of chance in art nature science and life How can chance a seemingly capricious phenomenon be made to work for someone One controlled use of chance is through the Chinese I Ching chance operations method of composer and artist John Cage 1912 1992 This book addresses the questions of how one might approach using this method in landscape architectural design what the outcome of such an indeterminate design would be and whether or not it could lead to a viable constructed landscape In addition this book answers the question What is the relationship between the I Ching John Cage and the constructed landscape anyway The final product of the exploration of this method is a new hypothetical redesign of an existing plaza using Cage's techniques and a comparative evaluation of the new indeterminate concept and the two pre-existing designs using the original program objectives as a guide against which the three designs can be judged for effectiveness

Debordered space Markus Jatsch, 2004 Text in English and German This monograph describes the construction of reality through the cognitive subject and associated with this potential ways for producing space The book studies methods for exposing through indeterminacy the definition of space to a larger field of possibility within personal interpretation and thus virtually de bordering space Against a historical background of past attempts to de border space visually new possible ways of indeterminately defining space through the modulation of light are shown The analysis of various modulation phenomena is illustrated with references to works of art and the phenomena are studied with a view to integrating them in the actual production of space The modulation of light has the potential of creating diffuse and ambivalent characteristics on space defining surfaces This fuzziness offers an opportunity for a freer interpretation of spatial definition and thus also for de bordering space due to the process of perception New materials and technologies can be used to create spatial worlds that open up genuine hitherto unknown realms of cognition and experience Based on multilayered ambiguous spatial situations according to the author new open spaces of perception are possible and thus an expansion of human consciousness as well with respect to the world around us

Architectures of Chance Yeoryia Manolopoulou, 2017-03-02 Architectural discourse and practice are dominated by a false

dichotomy between design and chance and governed by the belief that the architect's role is to defend against the indeterminate. In *Architectures of Chance*, Yeoryia Manolopoulou challenges this position, arguing for the need to develop a more creative understanding of chance as aesthetic experience and critical method and as a design practice in its own right. Examining the role of experimental chance across film, psychoanalysis, philosophy, fine art, and performance, this is the first book to comprehensively discuss the idea of chance in architecture and bring a rich array of innovative practices of chance to the attention of architects. Wide-ranging and through a symbiotic interplay of drawing and text, *Architectures of Chance* makes illuminating reading for those interested in the process and experience of design and the poetics and ethics of chance and space in the overlapping fields of architecture and the aleatoric arts.

**Archigram** Simon Sadler, 2005-06-24. The first book-length critical and historical account of an ultramodern architectural movement of the 1960s that advocated living equipment instead of buildings. In the 1960s, the architects of Britain's Archigram group and Archigram magazine turned away from conventional architecture to propose cities that move and houses worn like suits of clothes. In drawings inspired by pop art and psychedelia, architecture floated away, tethered by wires, gantries, tubes, and trucks. In *Archigram: Architecture without Architecture*, Simon Sadler argues that Archigram's sense of fun takes its place beside the other cultural agitators of the 1960s, originating attitudes and techniques that became standard for architects rethinking social space and building technology. The Archigram style was assembled from the Apollo missions, constructivism, biology, manufacturing, electronics, and popular culture, inspiring an architectural movement, High Tech, and influencing the postmodern and deconstructivist trends of the late twentieth century. Although most Archigram projects were at the limits of possibility and remained unbuilt, the six architects at the center of the movement—Warren Chalk, Peter Cook, Dennis Crompton, David Greene, Ron Herron, and Michael Webb—became a focal point for the architectural avant-garde because they redefined the purpose of architecture. Countering the habitual building practice of setting walls and spaces in place, Archigram architects wanted to provide the equipment for amplified living, and they welcomed any cultural rearrangements that would ensue. *Archigram: Architecture without Architecture* is the first full-length critical and historical account of the Archigram phenomenon, tracing Archigram from its rediscovery of early modernist verve through its courting of students to its ascent to international notoriety for advocating the disappearance of architecture.

**Mobility and Migration in Film and Moving Image Art** Nilgun Bayraktar, 2015-12-07. *Mobility and Migration in Film and Moving Image Art* explores cinematic and artistic representations of migration and mobility in Europe from the 1990s to today. Drawing on theories of migrant and diasporic cinema, moving image art, and mobility studies, Bayraktar provides historically situated close readings of films, videos, and cinematic installations that concern migratory networks and infrastructures across Europe, the Middle East, and Africa. Probing the notion of Europe as a coherent entity and a borderless space, this interdisciplinary study investigates the ways in

which European ideals of mobility and fluidity are deeply enmeshed with forced migration illegalization and xenophobia With a specific focus on distinct forms of mobility such as labor migration postcolonial migration tourism and refugee mobilities Bayraktar studies the new counter hegemonic imaginations invoked by the work of filmmakers such as Ay e Polat Fatih Akin Michael Haneke and Tony Gatlif as well as video essays and installations of artists such as Kutlu Ataman Ursula Biemann Ergin avu o lu Maria Iorio and Rapha l Cuomo Challenging aesthetic as well as national cultural and political boundaries the works central to this book envision Europe as a diverse inclusive and unfixed continent that is reimagined from many elsewheres well beyond its borders
